The Age of STEM Brigid Freeman,Simon Marginson,Russell Tytler,2014-10-24 Across the world STEM learning and work in Science Technology Engineering and Mathematics has taken central importance in education and the economy in a way that few other disciplines have STEM competence has become seen as key to higher productivity technological adaptation and research based innovation No area of educational provision has a greater current importance than the STEM disciplines yet there is a surprising dearth of comprehensive and world wide information about STEM policy participation programs and practice The Age of STEM is a state of the art survey of the global trends and major country initiatives in STEM It gives an international overview of issues such as STEM strategy and coordination curricula teaching and assessment women in STEM indigenous students research training STEM in the graduate labour markets STEM breadth and STEM depth The individual chapters give comparative international analysis as well as a global overview particularly focusing on the growing number of policies and practices in mobilising and developing talent in the STEM fields The book will be of particular interest to anyone involved in educational policy those in education management and leaders in both schooling and tertiary education It will have a wider resonance among practitioners in the STEM disciplines particularly at university level and for those interested in contemporary public policy

Radiomics and Radiogenomics Ruijiang Li,Lei Xing,Sandy Napel,Daniel L. Rubin,2019-07-09 Radiomics and Radiogenomics Technical Basis and Clinical Applications provides a first summary of the overlapping fields of radiomics and radiogenomics showcasing how they are being used to evaluate disease characteristics and correlate with treatment response and patient prognosis It explains the fundamental principles technical bases and

clinical applications with a focus on oncology The book's expert authors present computational approaches for extracting imaging features that help to detect and characterize disease tissues for improving diagnosis prognosis and evaluation of therapy response This book is intended for audiences including imaging scientists medical physicists as well as medical professionals and specialists such as diagnostic radiologists radiation oncologists and medical oncologists Features Provides a first complete overview of the technical underpinnings and clinical applications of radiomics and radiogenomics Shows how they are improving diagnostic and prognostic decisions with greater efficacy Discusses the image informatics quantitative imaging feature extraction predictive modeling software tools and other key areas Covers applications in oncology and beyond covering all major disease sites in separate chapters Includes an introduction to basic principles and discussion of emerging research directions with a roadmap to clinical translation

Recent Advances of Epigenetics in Crop Biotechnology Clelia De-la-Peña,Raúl Alvarez-Venegas,Christopher Cullis,2016-05-31 Epigenetics is a new field that explains gene expression at the chromatin structure and organization level Three principal epigenetic mechanisms are known and hundreds of combinations among them can develop different phenotypic characteristics DNA methylation histone modifications and small RNAs have been identified and their functions are being studied in order to understand the mechanisms of interaction and regulation among the different biological processes in plants Although fundamental epigenetic mechanisms in crop plants are beginning to be elucidated the comprehension of the different epigenetic mechanisms by which plant gene regulation and phenotype are modified is a major topic to develop in the near future in order to increase crop productivity Thus the importance of epigenetics in improving crop productivity is undoubtedly growing Current research on epigenetics suggest that DNA methylation histone modifications and small RNAs are involved in almost every aspect of plant life including agronomically important traits such as flowering time fruit development responses to environmental factors defense response and plant growth The aim of this Research Topic is to explore the recent advances concerning the role of epigenetics in crop biotechnology as well as to enhance and promote interactions among high quality researchers from different disciplines such as genetics cell biology pathology microbiology and evolutionary biology in order to join forces and decipher the epigenetic mechanisms in crop productivity
