Mastering Object-Oriented Python Steven F. Lott, 2019-06-14 Gain comprehensive insights into programming practices and code portability and reuse to build flexible and maintainable apps using object oriented principles Key Features Extend core OOP techniques to increase integration of classes created with Python Explore various Python libraries for handling persistence and object serialization Learn alternative approaches for solving programming problems with different attributes to address your problem domain Book Description Object oriented programming OOP is a relatively complex discipline to master and it can be difficult to see how general principles apply to each language's unique features With the help of the latest edition of Mastering Objected Oriented Python you'll be shown how to effectively implement OOP in Python and even explore Python 3.x Complete with practical examples the book guides you through the advanced concepts of OOP in Python and demonstrates how you can apply them to solve complex problems in OOP You will learn how to create high quality Python programs by exploring design alternatives and determining which design offers the best performance Next you'll work through special methods for handling simple object conversions and also learn about hashing and comparison of objects As you cover later chapters you'll discover how essential it is to locate the best algorithms and optimal data structures for developing robust solutions to programming problems with minimal computer processing Finally the book will assist you in leveraging various Python features by implementing object oriented designs in your programs By the end of this book you will have learned a number of alternate approaches with different attributes to confidently solve programming problems in Python What you will learn Explore a variety of different design patterns for the `__init__` method Learn to use Flask to build a RESTful web service Discover SOLID design patterns and principles Use the features of Python 3's abstract base Create classes for your own applications Design testable code using pytest and fixtures Understand how to design context managers that leverage the `with` statement Create a new type of collection using standard library and design techniques Develop new number types above and beyond the built-in classes of numbers Who this book is for This book is for developers who want to use Python to create efficient programs A good understanding of Python programming is required to make the most out of this book Knowledge of concepts related to object oriented design patterns will also be useful

Management Programming Languages Distributed and Parallel Systems and Knowledge Engineering Being crucial for the development of information systems software and data technologies encompass a large number of research topics and applications from implementation related issues to more abstract theoretical aspects of software engineering from databases and data warehouses to management information systems and knowledge base systems next to that distributed systems pervasive computing data quality and other related topics are included in the scope of this conference *Integrated Network Management VIII* Germán Goldszmidt, Schönwälder Jürgen, 2013-06-05 Welcome to 1M 2003 the eighth in a series of the premier international technical conference in this field As IT management has become mission critical to the economies of the developed world our technical program has grown in relevance strength and quality Over the next few years leading IT organizations will gradually move from identifying infrastructure problems to providing business services via automated intelligent management systems To be successful these future management systems must provide global scalability for instance to support Grid computing and large numbers of pervasive devices In Grid environments organizations can pool desktops and servers dynamically creating a virtual environment with huge processing power and new management challenges As the number type and criticality of devices connected to the Internet grows new innovative solutions are required to address this unprecedented scale and management complexity The growing penetration of technologies such as WLANs introduces new management challenges particularly for performance and security Management systems must also support the management of business processes and their supporting technology infrastructure as integrated entities They will need to significantly reduce the amount of adventitious bootless data thrown at consoles delivering instead a cogent view of the system state while leaving the handling of lower level events to self managed multifarious systems and devices There is a new emphasis on autonomic computing building systems that can perform routine tasks without administrator intervention and take prescient actions to rapidly recover from potential software or hardware failures

ECOOP 2008 - Object-Oriented Programming Jan Vitek, 2008-07-10 It is a pleasure to present the proceedings of the 22nd European Conference on Object Oriented Programming ECOOP 2008 held in Paphos Cyprus The conference continues to serve a broad object oriented community with a technical program spanning theory and practice and a healthy mix of industrial and academic participants This year a strong workshop and tutorial program complemented the main technical track We had 13 workshops and 8 tutorials as well as the co located Dynamic Language Symposium DLS Finally the program was rounded out with a keynote by Rachid Guerraoui and a banquet speech by James Noble As in previous years two Dahl Nygaard awards were selected by AITO and for the first time the ECOOP Program Committee gave a best paper award The proceedings include 27 papers selected from 138 submissions The papers were reviewed in a single blind process with three to five reviews per paper Preliminary versions of the reviews were made available to the authors a week before the PC meeting to allow for short 500 words or less author responses The responses were discussed at the PC meeting and were

instrumental in reaching decisions The PC discussions followed Oscar Nierstrasz Champion pattern PC papers had ve reviews and were held at a higher standard Agent and Multi-Agent Systems: Technologies and Applications Geun Sik Jo,Lakhmi Jain,2008-04-03 Following from the very successful First KES Symposium on Agent and Multi Agent Systems Technologies and Applications KES AMSTA 2007 held in Wroclaw Poland 31 May 1 June 2007 the second event in the KES AMSTA symposium series KES AMSTA 2008 was held in Incheon Korea March 26 28 2008 The symposium was organized by the School of Computer and Information Engineering Inha University KES International and the KES Focus Group on Agent and Mul agent Systems The KES AMSTA Symposium Series is a sub series of the KES Conference Series The aim of the symposium was to provide an international forum for scientific research into the technologies and applications of agent and multi agent systems Agent and multi agent systems are related to the modern software which has long been recognized as a promising technology for constructing autonomous complex and intelligent systems A key development in the field of agent and multi agent systems has been the specification of agent communication languages and formalization of ontologies Agent communication languages are intended to provide standard declarative mechanisms for agents to communicate knowledge and make requests of each other whereas ontologies are intended for conceptualization of the knowledge domain The symposium attracted a very large number of scientists and practitioners who submitted their papers for nine main tracks concerning the methodology and applications of agent and multi agent systems a doctoral track and two special sessions

Designing Thriving Systems Leslie J. Waguespack,2019-04-10 This monograph illuminates a design mindset for systems artefacts that not only survive but thrive Of itself an artefact is devoid of design quality until encountered in a specific social context by human attendants Design quality is the affect of an intertwining of a an artefact s structural and behavior properties b an attendant humanly conception of quality an appreciative system and c the enfolding social context of their encounter To pursue quality in design is to interweave these three strands bound as a durable cord that evokes a visceral satisfaction or the delight of a ringing musical chord The human consciousness of design quality is fundamentally metaphoric and dynamic a perception of reality mediated by a personal value disposition In the continuum of experience living moment after moment both the attendant s metaphorical appreciation and their sense of quality evolve And thus design quality issues from perpetual concentric cycles of design construct experience learn assess calibrate over the life span of relationship with an artefact Design as a verb s purpose is to service the life in that relationship sustain its survival and hopefully raise that life to a state of thriving Design quality manifests throughout the cycles of design as a verb rather than as a product of it Such is the mindset in which the designer must indwell and that design education must nurture While all artefacts are systems the domain of artefact design of which I am most experienced is computing systems Therefore I will rest upon that domain to explore a theory and practice of design as a verb designing thriving systems *The Cybersecurity Body of Knowledge* Daniel Shoemaker,Anne Kohnke,Ken Sigler,2020-04-08 The Cybersecurity Body of Knowledge explains

the content purpose and use of eight knowledge areas that define the boundaries of the discipline of cybersecurity The discussion focuses on and is driven by the essential concepts of each knowledge area that collectively capture the cybersecurity body of knowledge to provide a complete picture of the field This book is based on a brand new and up to this point unique global initiative known as CSEC2017 which was created and endorsed by ACM IEEE CS AIS SIGSEC and IFIP WG 11.8 This has practical relevance to every educator in the discipline of cybersecurity Because the specifics of this body of knowledge cannot be imparted in a single text the authors provide the necessary comprehensive overview In essence this is the entry level survey of the comprehensive field of cybersecurity It will serve as the roadmap for individuals to later drill down into a specific area of interest This presentation is also explicitly designed to aid faculty members administrators CISOs policy makers and stakeholders involved with cybersecurity workforce development initiatives The book is oriented toward practical application of a computing based foundation crosscutting concepts and essential knowledge and skills of the cybersecurity discipline to meet workforce demands Dan Shoemaker PhD is full professor senior research scientist and program director at the University of Detroit Mercy's Center for Cyber Security and Intelligence Studies Dan is a former chair of the Cybersecurity Information Systems Department and has authored numerous books and journal articles focused on cybersecurity Anne Kohnke PhD is an associate professor of cybersecurity and the principle investigator of the Center for Academic Excellence in Cyber Defence at the University of Detroit Mercy Anne's research is focused in cybersecurity risk management threat modeling and mitigating attack vectors Ken Sigler MS is a faculty member of the Computer Information Systems CIS program at the Auburn Hills campus of Oakland Community College in Michigan Ken's research is in the areas of software management software assurance and cybersecurity

Development and Evolution of Software Architectures for Product Families Frank van der Linden, 2003-08-06 This book originates from a workshop organised by ESPRIT project 20477 ARES in Las Palmas de Gran Canaria Spain February 1998 ARES is an acronym for Architectural Reasoning for Embedded Systems Within this project we investigate techniques to deal with problems of software architecture of families of embedded systems It is the second workshop organised by this project Its predecessor was held in Las Navas de Marques Spain November 1996 The proceedings of the first workshop are only available in electronic format at <http://www.dit.upm.es/ares> The second workshop succeeded even more than the first one in gathering many of the most prominent people working in the area of software architecture for product families or product lines This second workshop consisted of six sessions The first session was meant to report the ARES results according to the topics of the next five sessions The remaining sessions dealt with different aspects of software architecture focussed on applications for product families or product lines Because there will be a separate book covering all ARES results the first session is not included in this book The workshop was chaired by Henk Obbink from Philips Research and Paul Clements from the Software Engineering Institute at Carnegie Mellon University They prepared and presented an overall conclusion at the end of the workshop This conclusion was used in
