*zone: a source of oligodendrocytes in the adult brain* Oscar Gonzalez-Perez,Jose Manuel Garcia-Verdugo,Adan Aguirre,2014-09-30 Demyelinating diseases are characterized by an extensive loss of oligodendrocytes and myelin sheaths from axolemma which commonly result in disability in young adults To date there is no effective treatment against these neurological disorders In the adult brain there are neural stem cells NSCs that reside within a niche denominated ventricular subventricular zone V SVZ in the lateral wall of the cerebral ventricles NSCs give rise to neurons and oligodendrocytes that

help preserve cellular homeostasis Growing evidence indicates that V SVZ progenitor cells may represent an endogenous source of oligodendrocytes that can be useful to treat demyelinating diseases This e Book The ventricular subventricular zone as a source of oligodendrocytes in the adult brain collected the most recent evidence regarding the mechanisms that modulate the proliferation migration quiescence cell fate choices and survival of oligodendrocyte precursors generated in the V SVZ Herein we compiled information about the role of Sonic hedgehog NMDA receptors ErbB proteins hemopressin erythropoietin osmolarity and microglia in the oligodendrocyte production Some chapters also describe the role of oligodendrocyte precursors in the preservation of cellular homeostasis aging and white matter repair All these information is presented as novel research findings short communications and review articles which were written by experts in the field of oligodendrocyte generation myelin production and white matter re myelination

Estrogens and Memory Karyn M. Frick,2020 A book about the influence of estrogens on memory would have been unthinkable as recently as 30 years ago Although a few small studies in the late 1970 s reported a beneficial effect of estrogens on memory in human women Hackman and Galbraith 1976 Fedor

Freybergh 1977 examination of the role of estrogens in memory did not truly capture more widespread attention until the pioneering work of Barbara Sherwin and colleagues in 1988 and beyond. In her initial paper, Sherwin showed that bilateral removal of the ovaries aka surgical menopause led to impaired short term and long term memory whereas treatment of surgically menopausal women with estradiol alone, testosterone alone, or estradiol plus testosterone prevented this decline. Sherwin 1988. As a search for the terms estrogen and memory in PubMed illustrates, well over 2000 papers have been published on the subject of estrogens and memory in the ensuing decades. The vast majority of these studies have focused on the hippocampus, a bilateral medial temporal lobe structure essential for the formation of episodic memories, particularly those with spatial, contextual, relational, temporal, and recognition components. Olton et al 1979, Morris et al 1982, Kim and Fanselow 1992, Squire 1992, Cohen and Stackman 2015, Tonegawa et al 2015, Eichenbaum 2017. Although various forms of learning and memory are mediated by numerous brain regions including the prefrontal cortex, medial temporal lobe cortices, amygdala, striatum, and cerebellum, the hippocampus has received the lion's share of attention due to its central importance for episodic memory formation. Hippocampal damage produces profound retrograde amnesia for facts and events as well as anterograde amnesia for new information and impairments in spatial navigation. Winocur 1990, Anagnostaras et al 2001, Clark et al 2002, Gilboa et al 2006. Hippocampal dysfunction in middle aged and aged subjects is a primary contributor to age related memory decline. Golumb et al 1996, Grady et al 2003, Apostolova et al 2010, Burke and Barnes 2010, Small et al 2011, Yassa et al 2011, and has also been implicated in the cognitive impairments observed in diseases such as schizophrenia and depression. Small et al 2011, Nakahara et al 2018, Santos et al 2018, Ott et al 2019. Moreover, the hippocampi of patients with Alzheimer's disease are substantially atrophied and burdened with copious amounts of amyloid plaques and neurofibrillary tangles, the hallmark pathologies of this insidious disease. Hyman et al 1984, Walsh and Selkoe 2004, Selkoe and Hardy 2016. As such, understanding how estrogens influence hippocampal functioning may provide important insights not only about the fundamental neurobiology of memory processes but also into the etiology of neuropsychiatric and neurodegenerative diseases. Novel insights in rehabilitation of neglect, 2nd Edition Stefan Van Der Stigchel, Tanja Nijboer, 2015-01-09. Hemispatial neglect is the failure to report, respond to, or orient to novel or meaningful stimuli presented in the contralesional visual field. It constitutes one of the most invalidating neurological disorders that can occur after stroke. It is therefore important to treat neglect as adequately as possible, and much of the research dedicated to neglect therefore focuses on rehabilitation. In this special topic, you will find 29 articles on the rehabilitation of neglect. This Research Topic has opened new perspectives and has given us an indication of where the field is going. Although some of the current rehabilitation techniques have proven to be beneficial, there is limited agreement on the most valuable technique or the mechanisms underlying the ameliorating effects. Thermal Energy Yatish T. Shah, 2018-01-12. The book details sources of thermal energy, methods of capture, and applications.
