

USER'S MANUAL

RF MODULATOR WITH S-VIDEO INPUT

NOTE TO CATV SYSTEM INSTALLER:

INTRODUCTION

Your Video RF Modulator is designed to convert the separate audio and video signals from a video camera, computer, portable VCR, or satellite receiver, for example into "VHF" TV signals that you can view on a TV set.

The FCC Wants You to Know

This device complies with Part 15 of FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Your modulator might cause TV or radio interference even when it is operating properly. To determine whether your modulator is causing the interference, turn it off. If the interference goes away, your modulator is causing it.

Try to eliminate the interference by:

- moving your RF Modulator away from the receiver
- connecting your RF Modulator to an outlet that is on a different electrical circuit from the receiver
- contacting your local store for help.

If you cannot eliminate the interference, the FCC requires that you stop using your RF Modulator.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's FCC authorization to operate this equipment.

REQUIRED PARTS

The following items (not supplied) are required to connect your RF Modulator to a video input source and your TV:

- one audio/video shielded cable with three phono connectors at each end, if the video source's audio output is stereo; or one audio/video shielded cable with two phono connectors at each end if the video source's audio output is monaural
- two TS-ohm coaxial cables with F-type connectors
- a TS-ohm-to-300-ohm matching transformer, if your TV does not have a 75-ohm TS-ohm F-connector

Note: The audio signal will be modulated to mono, whether the video source is stereo or monaural.

Note to the CATV System Installer: This reminder is provided to call the CATV system installer's attention to article 528-22 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable shield shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

INSTALLATION

1. Seat the RF Modulator vertically:

Plug in the seat plate (included) on the bottom of the RF Modulator until the locking tabs of the seat plate click in to secure the plate to the RF Modulator.

2. Seat the RF Modulator horizontally:

2.1 While pulling up the locking tabs, remove the seat plate by pushing out the seat plate.

2.2 Attach the four self-adhesive rubber pads (included) to the side face of the RF Modulator.

2.3 Lay down the RF Modulator on the side with the rubber pads.

CONNECTIONS

Follow these steps to connect your RF Modulator.

1. If your video source is stereo, plug the connectors on one end of a stereo A/V cable into the video and audio input jacks on the RF Modulator. Plug the connectors on the cable's other end into the video and audio output jacks on the video source, using the color coding on the connectors as a guide.

If your video source is monaural, plug the connectors on one end of an A/V cable into the video and audio input jacks on the RF Modulator (using either the AUDIO R or L jack). Plug the cable's other ends into the video and audio jacks on the video source. Connect the TS-ohm coaxial cables to the RF Modulator following these guidelines:

• If your video source is equipment with VHS VIDEO (S-video) output, you can use a S-video cable to connect the S-video output of video source to the S-video input of this RF modulator.
