Handbook of Learning and Cognitive Processes (Volume 2) William Estes, 2014-06-20 Originally published in 1975 Volume 2 of this Handbook looks at areas traditionally associated with learning theory such as conditioning discrimination and behavior theory It deals with concepts and theories growing principally out of laboratory studies of conditioning and learning The intention was to treat mechanisms processes and principles of some generality applicable at least to all vertebrates It was becoming well understood that detailed

interpretations of particular behaviors required the authors to take account of the way general principles operate in the context of species specific behavioral organizations and developmental histories but detailed consideration of just how these interpretations were accomplished for different animal forms was another enterprise Here the authors limit their task to abstracting from the enormous literature facts and ideas which seemed general enough to be of interest and perhaps utility to investigators in other disciplines at the time Volume 1 presented an overview of the field and introduced the principal theoretical and methodological issues that persistently recurred in the expanded treatments of specific research areas that comprise the later volumes Volume 3 looks at human learning and motivation while the last 3 volumes range over the many active lines of research identified with human cognitive processes at the time

Economic Choice Theory John H. Kagel, Raymond C. Battalio, Leonard Green, 1995-01-27 This book describes the authors research program using laboratory animals to investigate individual choice theory in economics

The Matching Law Richard J. Herrnstein, 1997 This impressive collection features Richard Herrnstein s most important and original contributions to the social and behavioral sciences his papers on choice behavior in animals and humans and on his discovery and elucidation of a general principle of choice called the matching law In recent years the most popular theory of choice behavior has been rational choice theory Developed and elaborated by economists over the past hundred years it claims that individuals make choices in such a way as to maximize their well being or utility under whatever constraints they face that is people make the best of their situations Rational choice theory holds undisputed sway in economics and has become an important explanatory framework in political science sociology and psychology Nevertheless its empirical support is thin The matching law is perhaps the most important competing explanatory account of choice behavior It views choice not as a single event or an internal process of the organism but as a rate of observable events over time It states that instead of maximizing utility the organism allocates its behavior over various activities in exact proportion to the value derived from each activity It differs subtly but significantly from rational choice theory in its predictions of how people exert self control for example how they decide whether to forgo immediate pleasures for larger but delayed rewards It provides through the primrose path hypothesis a powerful explanation of alcohol and narcotic addiction It can also be used to explain biological phenomena such as genetic selection and foraging behavior as well as economic decision making

Handbook of Learning and Cognitive Processes W. Estes, 2022-07-30

Is it possible at present to identify a core cluster of theoretical ideas concepts and methods with which everyone working in the area of learning and cognition needs to be familiar Would it be possible to make explicit the relationships that we feel do or must exist among the various subspecialties ranging from conditioning through perceptual learning and memory to psycholinguistics and to present these in a sufficiently organized way to help specialists and non specialists alike in relating

particular lines of research to the broader spectrum of activity These questions were posed to a substantial number of investigators who were most active in developing the ideas and doing the research in the early 1970s Originally published between 1975 and 1978 their response constitutes this 6 volume Handbook of Learning and Cognitive Processes The volumes survey the research and theory on learning and cognitive processes that were rapidly developing at the time The primary orientation was to concentrate on research and models aimed toward the development of general cognitive theory They were up to date with regard to theoretical and technical developments and sufficiently self contained to be readable by anyone with a reasonable scientific background regardless of their acquaintance with the technical jargon of particular specialties Previously out of print the Handbook is now available again as a set or as individual volumes **Advances in Neural**

Staddon, 2022-02-21 This classic edition of the Handbook of Operant Behavior presents seminal work in the field of learning and behavior foreshadowing a new direction for learning research and presenting many questions that remain unanswered Featuring impressive contributions from leading figures across the field ranging from N J Mackintosh from what was to become the cognitive school through Morse Kelleher Hutchinson and Hineline on the neglected topic of aversive control to Blough and Blough on psychophysics to Philip Teitelbaum on behavioral physiology the book is a must read for anyone interested in human and animal learning In a newly written introduction J E R Staddon highlights several issues that deserve more attention how language is learned and syntax evolves how animals choose and a new paradigm for the study of learning in general The book is essential reading for all students and researchers of learning and behavior and aims to encourage researchers to revisit some of the fascinating behavioral questions raised by the original book **Neuroeconomics** Paul W.

Glimcher, 2013-08-13 In the years since it first published Neuroeconomics Decision Making and the Brain has become the standard reference and textbook in the burgeoning field of neuroeconomics The second edition a nearly complete revision of this landmark book will set a new standard This new edition features five sections designed to serve as both classroom friendly introductions to each of the major subareas in neuroeconomics and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline The first of these sections provides useful introductions to the disciplines of microeconomics the psychology of judgment and decision computational neuroscience and anthropology for scholars and students seeking interdisciplinary breadth The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems Chapters on risk time preferences social preferences emotion pharmacology and common neural currencies each written by leading experts lay out the foundations of neuroeconomic thought The third section contains both overview and in depth chapters on the fundamentals of reinforcement learning value learning and value representation The fourth section The Neural Mechanisms for Choice

integrates what is known about the decision making architecture into state of the art models of how we make choices The final section embeds these mechanisms in a larger social context showing how these mechanisms function during social decision making in both humans and animals The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field A clear explanatory style and a single expository voice characterize all chapters making core issues in economics psychology and neuroscience accessible to scholars from all disciplines The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general Editors and contributing authors are among the acknowledged experts and founders in the field making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers Introductory chapters on economics psychology neuroscience and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning risk inter temporal choice drift diffusion models game theory and prospect theory make this an invaluable reference Published in association with the Society for Neuroeconomics www.neuroeconomics.org Full color presentation throughout with numerous carefully selected illustrations to highlight key concepts
