Robert Fink,Melinda Latour,Zachary Wallmark,2018-09-18 The Relentless Pursuit of Tone Timbre in Popular Music assembles a broad spectrum of contemporary perspectives on how sound functions in an equally wide array of popular music Ranging from the twang of country banjos and the sheen of hip hop strings to the crunch of amplified guitars and the thump of subwoofers on the dance floor this volume bridges the gap between timbre our name for the purely acoustic characteristics of sound waves and tone an emergent musical construct that straddles the borderline between the perceptual and the political Essays engage with the entire history of popular music as recorded sound from the 1930s to the present day under four large categories Genre asks how sonic signatures define musical identities and publics Voice considers the most naturalized musical instrument the human voice as racial and gendered signifier as property or likeness and as raw material for algorithmic perfection through software Instrument tells stories of the way some iconic pop music machines guitars strings synthesizers got or lost their distinctive sounds Production then puts it all together asking structural questions about what happens in a recording studio what is produced sonic cartoons rockist authenticity empty space and what it all might mean      Assessment for Reading Instruction, Second Edition Michael C. Geotechnical Engineering of Dams, 2nd Edition Robin Fell, Patrick MacGregor, David Stapledon, Graeme Bell, Mark Foster, 2014-11-21. Geotechnical Engineering of Dams 2nd edition provides a comprehensive text on the geotechnical and geological aspects of the investigations for and the design and construction of new dams and the review and assessment of existing dams. The main emphasis of this work is on embankment dams but much of the text particularly those parts related to geology can be used for concrete gravity and arch dams. All phases of investigation design and construction are covered. Detailed descriptions are given from the initial site assessment and site investigation program through to the preliminary and detailed design phases and ultimately the construction phase. The assessment of existing dams including the analysis of risks posed by those dams is also discussed. This wholly revised and significantly expanded 2nd edition includes a lengthy new appendix on the assessment of the likelihood of failure of dams by internal erosion and piping. This valuable source on dam engineering incorporates the 200 years of collective experience of the authors in the subject area. Design methods are presented in combination with their theoretical basis to enable the reader to develop a proper understanding of the possibilities and limitations of a method. For its practical well-founded approach this work can serve as a useful guide for professional dam engineers and engineering geologists and as a textbook for university students.

**Modeling the Radiation of Modern Sound Reinforcement Systems in High Resolution** Stefan Feistel, 2014. Starting from physical theory this work develops a novel framework for the acoustic simulation of sound radiation by loudspeakers and sound reinforcement systems. First a theoretical foundation is derived for the accurate description of simple and multi-way loudspeakers using an advanced point source CDPS model that incorporates phase data. The model's practical implementation is presented including measurement requirements and the GLL loudspeaker data format.

specification In the second part larger systems are analyzed such as line arrays where the receiver may be located in the near field of the source It is shown that any extended line source can be modeled accurately after decomposition into smaller CDPS elements The influence of production variation among elements of an array is investigated and shown to be small The last part of this work deals with the consequences of fluctuating environmental conditions such as wind and temperature on the coherence of sound signals from multiple sources A new theoretical model is developed that allows predicting the smooth transition from amplitude to power summation as a function of the statistical properties of the environmental parameters A part of this work was distinguished with the AES Publications Award 2010 Parts of the proposed data format have been incorporated into the international AES56 standard
