sedimentary basins The science of stratigraphy and sedimentology is central to such endeavors but although several excellent textbooks on sedimentology have appeared in recent years little has been written about modern stratigraphic methods Sedimentology textbooks tend to take a theoretical approach building from physical and chemical theory and studies of modern environments It is commonly difficult to apply this information to practical problems in ancient rocks and very little guidance is given on methods of observation mapping and interpretation In this book theory is downplayed and the emphasis is on what a geologist can actually see in outcrops well records and cores and what can be obtained using geophysical techniques A new approach is taken to stratigraphy which attempts to explain the genesis of lithostratigraphic units and to de-emphasize the importance of formal description and naming There are also sections explaining principles of facies analysis basin mapping methods depositional systems and the study of basin thermal history so important to the genesis of fuels and minerals Lastly an attempt is made to tie everything together by considering basins in the context of plate tectonics and eustatic sea level changes
