*Mathematics for Neuroscientists* Fabrizio Gabbiani, Steven James Cox, 2010-09-16 Virtually all scientific problems in neuroscience require mathematical analysis and all neuroscientists are increasingly required to have a significant understanding of mathematical methods There is currently no comprehensive integrated introductory book on the use of mathematics in neuroscience existing books either concentrate solely on theoretical modeling or discuss mathematical concepts for the treatment of very specific problems This book fills this need by systematically introducing mathematical and computational tools in precisely the contexts that first established their importance for neuroscience All mathematical concepts will be introduced from the simple to complex using the most widely used computing environment Matlab This book will provide a grounded introduction to the fundamental concepts of mathematics neuroscience and their combined use thus providing the reader with a springboard to cutting edge research topics and fostering a tighter integration of mathematics and neuroscience for future generations of students A very didactic and systematic introduction to mathematical concepts of importance for the analysis of data and the formulation of concepts based on experimental data in neuroscience Provides introductions to linear algebra ordinary and partial differential equations Fourier transforms probabilities and stochastic processes Introduces numerical methods used to implement algorithms related to each mathematical concept Illustrates numerical methods by applying them to specific topics in neuroscience including Hodgkin Huxley equations probabilities to describe stochastic release stochastic processes to describe noise in neurons Fourier transforms to describe the receptive fields of visual neurons Allows the mathematical novice to analyze their results in more sophisticated ways and consider them in a broader theoretical framework

*Applied Mathematics and Computational Mechanics for Smart Applications* Lakhmi C. Jain, Margarita N. Favorskaya, Ilia S. Nikitin, Dmitry L. Reviznikov, 2021-03-14 This book presents best selected research papers presented at the Thirteenth International Conference on Applied Mathematics and Mechanics in the Aerospace Industry AMMAI 2020 held from September 6 to September 13 2020 at the Alushta Health and Educational Center The Republic of Crimea The book is dedicated to solving actual problems of applied mechanics using modern computer technology including smart paradigms Physical and mathematical models numerical methods computational algorithms and software complexes are discussed which allow to carry out high precision mathematical modeling in fluid gas and plasma mechanics in general mechanics deformable solid mechanics in strength destruction and safety of structures etc Technologies and software systems that provide effective solutions to the problems at various multi scale levels are considered Special attention is paid to the training of highly qualified specialists for the aviation and space industry The book is recommended for specialists in the field of applied mathematics and mechanics mathematical modeling information technologies and developers of modern applied software systems
