26 March, our Independence Day, is the one of the most important state festival. The day is celebrated every year in the country with great enthusiasm and fervour. It is a national holiday. All offices, educational institutions, shops and factories remain closed on this day. The day begins with a 31 gun salute. Early in the morning the President and the Prime Minister, on behalf of the nation place floral wreaths at the National Mausoleum at Savar. Then other leaders, political parties, diplomats, social and cultural organisations, educational institutions and freedom fighters pay homage to the martyrs. People from all walks of the also go there in rallies and processions. There are many cultural programmes throughout the day, highlighting the heroic struggle and sacrifice in 1971.

In Bangabandhu National Stadium, school children, scouts and girls guides take part in various displays to entertain thousands of spectators. Educational institutions also organise their individual programmes. Sports meets and tournaments are also organised on the day, including the exciting boat race in the river Buriganga. In the evening, all major public buildings are illuminated with colourful lights. Bangla Academy, Bangladesh Shilpakala Academy and other socio-cultural organisations hold cultural functions. Similar functions are also arranged in other places in the country.

T cells the available number of germline genes coding for T cell receptor TCR variable elements of T cells is very small. Moreover, there is a preferential localization of T cells expressing given Vgamma and Vdelta genes in certain tissues. In humans, T cells expressing the Vg9Vd2 encoded TCR account for anywhere between 50 and 95% of peripheral blood T cells, whereas cells expressing non Vd2 genes dominate in mucosal tissues. In mice, there is an ordered appearance of T cell waves during embryonic development, resulting in preferential localization of T cells expressing distinct Vgamma/Vdelta genes in the skin, the reproductive organs or gut epithelia. The major function of T cells resides in local immunosurveillance and immune defense against infection and malignancy. This is supported by the identification of ligands that are selectively recognized by the TCR. As an example, human Vgamma9Vdelta2 T cells recognize phosphorylated metabolites/phosphoantigens that are secreted by many pathogens but can also be overproduced by tumor cells, providing a basis for a role of these T cells in both anti-infective and anti-tumor immunity. Similarly, the recognition of endothelial protein C receptor by human non Vdelta2 T cells has recently been identified to provide a link for the role for such T cells in immunity against epithelial tumor cells and cytomegalovirus infected endothelial cells. In addition to classical functions such as cytokine production and cytotoxicity, recent studies suggest that subsets of T cells can exert additional functions such as regulatory activity and quite surprisingly, professional antigen presenting capacity. It is currently not well known how this tremendous extent of functional plasticity is regulated and what is the extent of TCR ligand diversity. Due to their non-MHC restricted recognition of unusual stress associated ligands, T cells have raised great interest as to their potential translational application in cell-based immunotherapy. Topics of this Research Focus include: Molecular insights into the activation and differentiation requirements of T cells; role of pyrophosphates and butyrophilin molecules for the activation of human T cells; role of T cells in tumor immunity and in other infectious and non-infectious diseases and many others. We are most grateful to all colleagues who agreed to write a manuscript. Thanks to their contributions, this E-book presents an up-to-date overview on many facets of the still exciting T cells. Dieter Kabelitz, Julie D. Chanet, Merville. Developments in Earthquake Geotechnics Susumu Iai, 2017-10-17. This book provides a timely review and summary of the recent advances in state-of-the-art earthquake geotechnics. The earthquake disasters in Japan and New Zealand in 2011 prompted the urgent need for the state-of-the-art earthquake geotechnics to be put into practice for disaster mitigation. By reviewing the developments in earthquake geotechnics over more than half a century, this unique book enables readers to obtain solid grasp of this discipline. It is based on contributions from 18 leading international experts who met in Kyoto in June 2016 to discuss a range of issues related to the developments of earthquake geotechnics. It comprehensively discusses various areas of earthquake geotechnics, including performance based seismic design, the evolution of geotechnical seismic response analysis from 1964-2015, countermeasures against liquefaction, solutions for nuclear power plant disasters, the tsunami caused inundation of the Tokyo metropolitan area, and a series of state-of-the-art effective stress analyses of case histories from the 2011 East Japan Earthquake. The book is of

interest to advanced level researchers and practicing engineers in the field of earthquake geotechnics
