subjects participating in laboratory experiments often violate expected utility maximization. They tend to use subjective probability beliefs that differ systematically from the objective probabilities and to base their decisions on changes in wealth rather than on total wealth. The above approaches are discussed and compared in this book. We also discuss cases in which stochastic dominance rules coincide with the mean variance rule and cases in which contradictions between these two approaches may occur. We then discuss the relationship between stochastic dominance rules and prospect theory and establish a new investment decision rule which combines the two and which we call prospect stochastic dominance. Although all three approaches are discussed, most of the book is devoted to the stochastic dominance paradigm. *Exam Ref 70-341 Core Solutions of Microsoft Exchange Server 2013 (MCSE)* Paul Robichaux, Bhargav Shukla, 2015-04-06.
