Mathematical Physical Chemistry Shu Hotta, 2018-01-23 This book introduces basic concepts of mathematical physics to chemists Many textbooks and monographs of mathematical physics may appear daunting to them Unlike other related books however this one contains a practical selection of material particularly for graduate and undergraduate students majoring in chemistry The book first describes quantum mechanics and electromagnetism with the relation between the two being emphasized Although quantum mechanics covers a broad field in modern physics the author focuses on a hydrogen like atom and a harmonic oscillator with regard to the operator method This approach helps chemists understand the basic concepts of quantum mechanics aided by their intuitive understanding without abstract argument as chemists tend to think of natural phenomena and other factors intuitively rather than only logically The study of light propagation reflection and transmission in dielectric media is of fundamental importance This book explains these processes on the basis of Maxwell equations The latter half of the volume deals with mathematical physics in terms of vectors and their transformation in a vector space Finally as an example of chemical applications

quantum chemical treatment of methane is introduced including a basic but essential explanation of Green functions and group theory Methodology developed by the author will also prove to be useful to physicists
