**Perspective Rendering for the Theatre** William H. Pinnell, 1996 William H Pinnell first issues an invitation to investigate the magic of perspective and explore its wondrous surround then escorts the beginning as well as the advanced student through the complex process of artistically conveying scene designs via the scenographic drawing Step by step he illustrates the principles of perspective that apply to stage design Starting with a brief history of perspective he furnishes all of the information designers will need to transform a blank surface into a unique expression of theatrical space As Pinnell makes clear a stage setting must be fully planned far in advance of its actual construction Each designer must have a picture of how the setting will appear when it is ready for opening night The scenic designer must then be able to render that picture to communicate his or her ideas through a series of initial sketches that combined with directorial consultation eventually

evolve into an approved plan for the actual setting. Many of these plans take the form of working drawings, floor plans, elevations, and the related schematics necessary for the shop staff to construct the design. Pinnell insists that as closely as possible the model, the graphic and tangible rendering of the designer's vision must reflect what the actual stage set will look like when the audience sees it in the performance. His concern is to show how one faithfully and accurately represents the actual finished stage design through theatrical rendering. Pinnell achieves this goal through an introduction and six chapters. He provides the historical background in a chapter titled *The Perspective Phenomenon*, which covers preclassical Greece, Greek and Roman notions of perspective, and the concepts of the Italian Renaissance. *The Perspective Grid: Learning the Basics* deals with drafting tools, drawing the perspective grid, and the basics of measuring on the perspective grid. *The Perspective Grid: Expanding the Basics* discusses transferring a simple interior setting, plotting curves, and creating levels. *The Perspective Grid: Variations* analyzes the thrust stage, the raked stage, and the two-point perspective grid. *Coloration and Form* explains varied backgrounds, color media, and rendering with gouache. Finally, *Presentation* explains protection, framing, duplication, and the portfolio. Except for the intricacies of the human anatomy, there is nothing a designer must draw scenically that is not covered in this book.

*Drafting for the Theatre* Dennis Dorn, Mark Shanda, 1992. In the early sessions, Dorn and Shanda focus on the basics of lettering, tool introduction, geometric constructions, orthographic techniques, soft line sketching, applications, and dimensioning and notation skills. After several weeks, the student begins to apply these drafting skills to design and technical theatre. At this point, the projects in the text expand to include ancillary skills such as time and material estimation, shop drawing nomenclature, and techniques such as simplified drafting, pin graphics, theatre drafting standards, and CADD processes. The text concludes with a final project that will help the student develop a portfolio set of drawings.

**TD & T.**, 2007. **Sceno-graphic Techniques** Wilford Oren Parker, 1987. The first book to bring together the drafting techniques, descriptive geometry, engineering drawing, and graphics of perspective needed to plan and execute a setting for the theatre. Parker presents these elements in a logical three-part format. *The Language of Lines* offers a study of drafting techniques, conventions, and symbols peculiar to the theatre. *Graphic Solutions* deals with the graphic problem-solving often needed to draw and make the frequent irregular forms of present-day scene design. *Perspective in the Theatre* treats the two-dimensional perspective of the designer's sketch and the three-dimensional perspective required for an illusion or stylistic concept.

*Master Teachers of Theatre* Burnet M. Hobgood, 1988. Claribel Baird reviews the interpretation of classical texts for theatrical performance. Howard Bay interrupted his stage design career of more than 150 Broadway productions to help students. Bernard Beckerman asks if there are approaches to the teaching of dramatic literature that particularly suit drama as theatre. Robert Benedetti offers suggestions on the teaching of acting. Oscar Brockett treats the problems of the theatre teacher and the processes of learning. Agnes Haaga shows that the essential quality in heading up child drama programs is a sense of joyous delight. Wallace Smith discusses methods for teaching secondary
