1. B is a solution containing 5.30g of anhydrous sodium trioxocarbonate (IV) per dm³. A is a solution of hydrochloric acid of unknown concentration. Put A into the burette and titrate 25cm³ (or 20cm³) portions of B with A. Using methyl orange as the indicator. Record the volume of your pipette. Tabulate your burette readings, and calculate the average volume of acid used. From your results, calculate:
- The concentration of solution B in moles per dm³
 - The concentration of solution A in moles per dm³
 - The mass concentration in g per dm³ of the acid in solution A

The equation of reaction is :

(H = 1; C = 12; O = 16; Na = 23; Cl = 35.5)

2. (a). If you were provided with anhydrous CaCO₃, spatula and stirrer (i) list three other materials you would require to prepare a standard solution of CaCO₃ (ii) State what you would observe on adding dilute HCl to a portion of the CaCO₃
- (b). State what would be observed when aqueous ammonia is added to: (i) Litmus paper; (ii) Pb(NO₃)₂ solution in drops until in excess.

Natural Product Biosynthesis Christopher T Walsh,Yi Tang,2022-12-14 Authored by leading experts in the enzymology of natural product biosynthesis this completely revised and updated edition provides a description of the types of natural products the biosynthetic pathways that enable the production of these molecules and an update on the discovery of novel products in the post genomic era Although some 500 000 600 000 natural products have been isolated and characterized over the past two centuries there may be a 10 fold greater inventory awaiting immediate exploration based on biosynthetic gene cluster predictions The approach of this book is to codify the chemical logic that underlies each natural product structural class as they are assembled from building blocks of primary metabolism This second edition integrates many new findings into the sets of principles of the first edition that parsed categories of natural product chemistries into the underlying enzymatic mechanisms and the catalytic machinery for building the varied and complex end product metabolites New chapters include evaluation of a core set of thermodynamically activated but kinetically stable metabolites that power both primary and secondary metabolic pathways Also after decades of uncertainty about the existence of various pericyclase classes a series of genome mining heterologous expression and enzymatic activity characterization have validated a plethora of pericyclases over the past decade The several types of pericyclases are involved in biosynthetic complexity generation of almost every major category of natural products This text will serve as a reference point for chemists of every subdiscipline including synthetic organic chemists and medicinal chemists It will also be valuable to bioinformatic and computational biologists pharmacognocists and chemical ecologists and bioengineers and synthetic biologists **Hunter's Tropical**
