Mathematical Modeling in Systems Biology Brian P. Ingalls, 2022-06-07 An introduction to the mathematical concepts and techniques needed for the construction and analysis of models in molecular systems biology. Systems techniques are integral to current research in molecular cell biology and system level investigations are often accompanied by mathematical models. These models serve as working hypotheses they help us to understand and predict the behavior of complex systems. This book offers an introduction to mathematical concepts and techniques needed for the construction and interpretation of models in molecular systems biology. It is accessible to upper level undergraduate or graduate students in life science or engineering who have some familiarity with calculus and will be a useful reference for researchers at all levels. The first four chapters cover the basics of mathematical modeling in molecular systems biology. The last four chapters address specific biological domains treating modeling of metabolic networks of signal transduction pathways of gene regulatory networks and of electrophysiology and neuronal action potentials. Chapters 3-8 end with optional sections that address more specialized modeling topics. Exercises solvable with pen and paper calculations appear throughout the text to encourage interaction with the mathematical techniques. More involved end of chapter problem sets require computational software. Appendixes provide a review of basic concepts of molecular biology additional mathematical background material and tutorials for two computational software packages XPPAUT and MATLAB that can be used for model simulation and analysis.

Chemistry and Biology of Pteridines and Folates June E. Ayling, M. Gopal Nair, Charles M. Baugh, 2012-12-06 The pteridines in their multitude of forms fulfill many roles in nature ranging from pigments to cofactors for numerous redox and one carbon transfer reactions. This extraordinary diversity of function is unified by the unique chemistry of the pteridine heterocycle. The International Symposium on the Chemistry and Biology of Pteridines and Folates is a forum for presenting recent and exciting advances in this expanding field. In of ideas results that has often stimulated bringing together various disciplines a synergy fresh approaches to major problems. The Tenth International Symposium held at Orange Beach Alabama March 21-23 1993 proved no exception by providing new insights into folate enzymology tetrahydrobiopterin and molybdopterin biosynthesis and function enzyme synthesis and regulation along with novel synthetic strategies for producing compounds that will expedite further study. The many outstanding scientific contributions found in the following chapters which represent the work presented at the Symposium are a reflection of the significant advances made since the Ninth International Symposium held in Zurich in 1989. Since the 7th International Symposium in St Andrews Scotland a tradition has evolved of honoring scientists who have made outstanding contributions to pteridine research with a Gowland Hopkins medal and lectureship Sir Frederick Gowland Hopkins initiated the first investigation of what later proved to be pteridines in his studies of the yellow and white colors of butterflies.
