PLASMA PROTEIN BINDING

PLASMA PROTEINS

If blood is centrifuge at the bottom of test tube solid bodies are collected and supernant liquid collected is plasma which contain 7% of protein to which various drug can bind.

ed = solid bodies (cells) 45% + plasma 55% { Water (92%) protein (7%)}

BINDING OF DRUG TO PLASMA PROTEIN

- The complex formation of drug with protein is called as protein binding of drug. Drug – protein binding is a reversible process.
- The extent of binding of drugs to various plasma proteins.
Albumin > α 1-Acid glycoprotein > Lipoproteins > Globulins.
- Such bound drug is both **pharmacokinetically** as well as **pharmacodynamically inert** i.e. a protein bound drug is neither metabolized nor excreted nor it is pharmacologically active.
- A bound drug is also restricted since it remains confined to a particular tissue for which it has greater affinity. Moreover, such bound drug because of its enormous size cannot undergo membrane transport & thus its half life is increased.
- However this binding is rapidly reversible and non-specific – that is many drugs may bind to the same protein. Drug–plasma protein binding forms a “**reservoir**” of drug, but only the free (unbound) drug is available to the tissues to exert a therapeutic effect.
- Binding of drug generally is reversible process (hydrogen bond , hydrophobic bond , ionic bond , van der waal's forces). Irreversible drug binding though rare (covalent binding) is often a reason for carcinogenicity or tissue toxicity of drug ;for example covalent binding of paracetamol metabolities to liver results in hepatotoxicity .
- Binding of drugs falls into 2 classes:
 1. Binding of drugs to blood components like-
 - a) Plasma proteins
 - b) Blood cells
 2. Binding of drugs to extravascular tissue proteins, fats, bones ,etc

BINDING OF DRUG TO HUMAN SERUM ALBUMIN (HSA)

The human albumin (HSA), having a molecular weight of 65,000, Is the most abundant plasma protein (60% of total plasma) with large binding capacity. Both endogenous compounds such as fatty acids, bilirubin and tryptophan as well as drugs bind to HSA. A large variety of drugs ranging from weak acids, neutral compounds to weak bases bind to HSA. Four different sites on HAS have been identified for drug – binding.

Site-I Warfarin and Azapropazone binding site.

Several NSAIDs, sulfonamides, phenytoin, Bilirubin

Site –II Benzodiazepine & Diazepam binding site

All benzodiazepines , cloxacillin, Ibuprofen, ketoprofen, Fatty acids, Tryptophan
