Dugua, 2005-01-14 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 163 The North with its vast and varied landscapes sparse population and cold climate has always challenged its explorers physically mentally logistically and technically The scientific community in particular has known such challenges in the past and does so today especially in light of the projected intensification of climate change at high latitudes Indeed there are clear signs that change is already ongoing in many environmental variables Air temperature and annual precipitation including snowfall are increasing in many regions spring snow cover extent is decreasing lake and river ice freeze up dates are occurring later and breakup dates earlier glaciers are retreating rapidly permafrost temperatures are increasing and in many cases the permafrost is thawing and sea ice extent is at record minimums and thinning **Proceedings of the Western Snow Conference ,2003 Principles of Snow Hydrology** David R. DeWalle, Albert Rango, 2008-07-03 Principles of Snow Hydrology describes the factors that control the accumulation melting and runoff of water from seasonal snowpacks over the

surface of the earth The book addresses not only the basic principles governing snow in the hydrologic cycle but also the latest applications of remote sensing and techniques for modeling streamflow from snowmelt across large mixed land use river basins Individual chapters are devoted to climatology and distribution of snow snowpack energy exchange snow chemistry ground based measurements and remote sensing of snowpack characteristics snowpack management and modeling snowmelt runoff Many chapters have review questions and problems with solutions available online This book is a reference book for practicing water resources managers and a text for advanced hydrology and water resources courses which span fields such as engineering earth sciences meteorology biogeochemistry forestry and range management and water resources planning

Third Forest Vegetation Simulator Conference, 2008 The Forest Vegetation Simulator FVS is a suite of computer modeling tools for predicting the long term effects of alternative forest management actions FVS was developed in the early 1980s and is used throughout the United States and British Columbia The Third FVS conference held February 13 15 2007 in Fort Collins Colorado contains 20 papers They describe the use of FVS on the stand and landscape scale and to analyze fuels management in the presence of insects and fire Several papers compare FVS predictions of the effects of insects and disease to field measurements FVS is continually evolving and improving in technology and capability to meet the needs of its ever increasing user community Papers describe new methods for data acquisition and preparation for input to FVS new economic analysis capabilities within FVS new methods for simulating forest regeneration new developments in calculating growth and mortality and future plans for incorporating the effects of climate change in model simulations
