*Federal Register ,1993-08 Análisis de fallos en sistemas aeronáuticos DE SANTIS , AUGUSTO JAVIER,2015-01-01* Análisis de fallos en sistemas aeronáuticos es un libro cuya�nésis es la investigación del aspecto técnico de la industria aeroespacial con una perspectiva interdisciplinaria y una visión integral de aporte a la seguridad operacional. Se trata de una obra de utilidad para todos los sectores y especialidades de la actividad aeronáutica. Los contenidos y el análisis son de interés en la seguridad operacional tanto de los operadores comerciales como de la aviación general o las organizaciones militares con medios aéreos. A través de los avances técnicos y la investigación de accidentes y sucesos inseguros, la industria ha logrado incrementar los niveles de seguridad con ese criterio. Esta obra es estructurada de modo que el lector pueda utilizar este libro como lectura técnica o como manual de consulta sobre temas específicos. La cronología de los temas se ha desarrollado desde un marco histórico evolutivo partiendo desde las materias primas y las técnicas de fabricación, los conceptos de estructuras aeronáuticas, la mecánica de fractura, el análisis de fallos con y sin fractura, la mecánica de fatiga, los protocolos de análisis e investigación internacionales, los factores humanos y organizacionales en el área técnica, hasta un compendio de casos típicos que posibilita la fácil comprensión de conceptos abstractos. La obra se estructura en 13 capítulos desarrollados con un enfoque académico dentro de un marco histórico referencial y procesos de comprobación analítica. De igual modo, en todos los casos y capítulos se han utilizado datos históricos y gráficos obtenidos de investigaciones reales de fallos en servicio en la industria aeronáutica. Asimismo, el libro se nutre de gran cantidad de información obtenida durante el proceso de investigación técnica y detección de fallos en accidentes e incidentes de aviación. Como se indicaba anteriormente, la obra en su conjunto presenta una marcada visión sistemática cuyo objetivo es hallar las causas profundas de los fallos y las condiciones latentes presentes en el sistema que propician los accidentes e incidentes. El autor investigador técnico de accidentes de aviación lleva más de 15 años dedicado al estudio de la seguridad operacional desde el ámbito técnico por lo que ha participado en la investigación de accidentes de aviación de transporte, aviación general y aviación deportiva. Actualmente desempeña su labor profesional en la autoridad aeronáutica de la República Argentina como director nacional de investigaciones. También ha sido docente de temas técnicos específicos de investigación y es autor de otros trabajos y obras relacionados con este ámbito.

**Ingles Técnico Aeronáutico** Facundo Conforti,Augusto DeSantis, La industria aeroespacial es la segunda actividad ma s normada luego de las activi dades nucleares esta regida por infinidad de normas reglamentaciones directivas documentacio n especi fica y todo tipo de manuales de referencia obligatoria La gran mayori a llega a manos de usuarios operadores talleristas etc en idioma in gle s el idioma de uso aerona utico por naturaleza A ello se suma el hecho de que la industria aerona utica no esta aislada de las actividades humanas sino que interactua se nutre y hace su aporte a ellas creando la necesidad de un so lido vi nc nculo interdisciplinario Ahora bien si bien conocemos la existencia de esta necesidad de creacion de un fuerte vi nc nculo interdisciplinario tambie n sabemos que en esta tarea nos encontramos con una gran barrera en el mismo la comunicacion A partir de esto es posible considerar varios impedimentos en esa barrera Uno de los ma s importantes es el idioma como factor concurrente esta el uso de regionalismos y como consecuencia de ellos la aplicacion de jergas especificas Desde los albores de la aviacion hemos convivido con ese problema sucede que al incrementarse dia a dia el numero de operaciones al crecer el parque aeronautico y convertirse la aviacion en una necesidad para el resto de las actividades humanas las condiciones inseguras los incidentes y los accidentes continu an produciendo quedando de manifiesto las falencias de la industria en ese aspecto ii Las nuevas tecnologias en materiales los nuevos medios de diseño y los planes de mantenimiento con tecnicas de inspeccion no destructivas han reducido los riesgos latentes de fallas tecnicas pero no todos los aspectos relacionados con la vida humana puede solucionarlos la tecnologia por lo que en paralelo con los desarrollos tecnologicos se han creado conceptos de gestion del factor humano que han contribuido en gran medida a la seguridad operacional y desde el año 1978 su estudio y prevencion se ha expandido considerablemente por lo que en todos los programas de estudio y mejoramiento de la interaccion antropologica CRM MRM LOFT SHELL etc la comunicacion es un vinculo importante si mimo en la seguridad operacional Si trasladamos lo expuesto a las tareas diarias ya sea en la

operación de una aeronave en el mantenimiento de la misma en el control del tránsito aéreo en la administración de las empresas operadoras o en cualquier otra actividad relacionada con la industria aeroespacial se presentará el problema del uso del idioma inglés los regionalismos y las jergas específicas factores tendientes a desencadenar una sucesión de eventos inseguros que podrían desembocar en un incidente o en un accidente de consecuencias catastróficas. Cuando se analiza la comunicación oral y escrita es importante tener en cuenta que si bien manejamos un vocabulario técnico en común es inevitable tanto en inglés como en español el uso de regionalismos y argot jergón en inglés. Por ejemplo un técnico ecuatoriano hablaría de la bita cora de la aeronave mientras que un argentino hablaría de la libreta histórica de la aeronave. Esta diversidad puede justificarse como un caso de regionalismos de países diferentes ahorita bien en el segundo ejemplo el mismo técnico argentino en la provincia de Buenos Aires hablaría de chavetas para frenar un bulo mientras que otro técnico argentino en Córdoba hablaría de cupillas para frenar un bulo. En paralelo se puede ver también que los diferentes fabricantes tienen términos específicos con respecto a sus productos por ejemplo uno de los más conocidos fabricantes británicos de motores posee un sistema propio de códigos de denominación y aplicación de Boletines de Servicio no mandatorios muy distinto al que manejan sus competidores directos de Estados Unidos y Canadá. Por eso la intención de este manual es contemplar una cantidad importante de tales divergencias presentándolas en cada asiento específico para que el uso del término y el concepto se apliquen con la mayor propiedad posible. La propuesta de este manual es constituirse en una obra de referencia pensada como apoyo idiártico para interpretar y utilizar con mayor exactitud todos los niveles en que se presenta la terminología aeronáutica y contribuir a la aclaración de las dudas que continuamente se dan en la traducción de ambas lenguas en los diferentes campos de la aviación.
