Pharmacokinetics A. Pecile, 2012-12-06 Pharmacologists can be considered pioneers of the study of kinetics of materials introduced into biological systems The study of drug kinetics is particularly suited to a formulation of relatively simple models which make possible an interpretation of the time dependent nature of various important phenomena e g distribution by means of diffusion through membranes The objective of the NATO ASI Course on Pharmacokinetics was that of presenting and discussing the mathematical and statistical approaches currently available or being developed for the description interpretation and prediction of the fate of drugs and tracer substances administered to living beings Different physical methods for measuring drugs and tracer substances were considered but the emphasis was on the interpretation of the results of the measurements in terms of mathematical and statistical models The present book contains all invited lectures given in this Course by outstanding international authorities and specialists from different fields A great effort was made to keep a balance among the mathematical physical biological and clinical aspects of the problems exchange of ideas and experiences between scientists with a physico mathematical background and scientists with a biomedical background was encouraged and all participants were deeply involved in fruitful discussions This unique feature of the Course is also the unique characteristic of this book which is therefore mainly directed to people interested not just in acquiring a working knowledge of the methods but in developing new methods

Drug Discovery and Evaluation: Safety and Pharmacokinetic Assays Franz J. Hock, Michael K. Pugsley, 2024-10-21

Many aspects of drug safety have become an outstanding and even persistent issue and may occur during the process of both drug discovery and development Until 15 years ago drug discovery and evaluation was primarily a sequential process starting with the selection of the most pharmacologically active compound from a series of newly synthesized small molecule chemical series by means of distinctive pharmacological assays Safety aspects were addressed by evaluation of the selected compound at high doses in a series of specific studies directed at indications other than the intended indication of the new compound These tests are then followed by pharmacokinetic studies which are primarily conducted to confirm whether the selected compound possesses a suitable half life for sufficient exposure and efficacy and whether it has the desired properties specificity to the intended route of administration Safety aspects relied predominantly on the conduct of single and repeat toxicology dose studies which inform changes in organ structure rather than organ function Both toxicological and pharmacokinetic studies are adapted to the progress of studies in clinical pharmacology and clinical trials The new edition of this well and broadly accepted reference work contains several innovative and distinguished chapters This sequential strategy has been abandoned with this new version of the book for several reasons Of the possible multitude of negative effects that novel drugs may impart on organ function e g ventricular tachy arrhythmia many are detected too late in non clinical studies to inform clinicians On the other hand negative findings in chronic toxicity studies in animals may turn out to be irrelevant for human beings New scientific approaches e g high throughput screening human pluripotent stem cells transgenic animals knock out animals in silico models pharmaco genomics and pharmaco proteomics as well as Artificial Intelligence AI methods offered new possibilities There are several examples that show that the druggability of compounds was considerably underestimated when the probability of success of a new project was assessed The success rate in the pharmaceutical industry and the introduction of new chemical entities to the market per year dropped dramatically whereas the development time for a new compound increased sometimes exceeding the patent protection Research and development scientists involving the following changes therefore adopted a change of strategy Parallel instead of sequential involvement of the various disciplines multidimensional compound optimization The term Safety Pharmacology was coined The International Conference on Harmonization ICH founded a Safety Pharmacology Working Group and the Safety Pharmacology Society SPS was launched The discipline provided for evaluation development and validation of a multitude of safety tests outlined in the Core Battery of Studies Characterizing the exposure profile of a drug by conducting pharmacokinetic studies that evaluates the absorption distribution metabolism and excretion should to be investigated at an early stage of development as results

contribute to the selection of a compound for further development Advancements in Toxicology were achieved by the introduction of new methods e g in silico methods genetic toxicology computational toxicology and AI The book is a landmark in the continuously changing world of drug research and developments As such it is essential reading for many groups not only for all students of pharmacology and toxicology but also for industry scientists and physicians especially those involved in clinical trials of drugs and for pharmacists who must know the safety requirements of drugs The book is essential for scientists and managers in the pharmaceutical industry who are involved in drug discovery drug development and decision making in the development process In particular the book will be of use to government institutions and committees working on official guidelines for drug evaluation worldwide

Toxicity and pharmacokinetic biomarkers for personalized non-small cell lung cancer treatment Anna Svedberg, 2020-01-14 Lung cancer is the leading cause of cancer related deaths worldwide Unfortunately lung cancer is usually discovered at a late stage when the curative treatment options are limited The treatment can include surgery radiation chemotherapy targeted therapy and now also immunotherapy The challenge in cancer treatment is to eradicate cancer by the use of harsh treatments while still keeping the patient alive For this purpose treatments with severe toxicities are usually accepted but regularly lead to dose reductions or postponed treatment Large variations in response are generally observed between patients treated with the same drug at the same dose The dose may be adequate in one patient while ineffective or cause severe adverse drug reactions in other patients The occurrence of drug induced toxicities can however also be a positive indicator of treatment response In personalized treatment it is of importance to select the most suitable treatment option and give it at the most favorable dose to enable the patients to stay on treatment during the time the treatment is able to affect cancer since the tumor commonly develops resistance towards the treatment eventually In this thesis inter individual variability in pharmacokinetics and toxicity for the targeted therapy erlotinib associated with the adverse events skin rash and diarrhea was studied Inter individual variability in toxicity was also studied for the chemotherapy treatment gemcitabine carboplatin linked to the hematological toxicities neutropenia and leukopenia Erlotinib was studied in papers I IV Erlotinib and its metabolite concentrations were determined using a validated LC MS MS method Diarrhea was associated with erlotinib and the metabolite M13 while skin rash was associated with the activity of the erlotinib metabolizing enzyme CYP3A and the ABCG2 single nucleotide polymorphism rs10856870 CYP3A was also shown to be induced during treatment Additionally in vitro studies showed that genetic variability in ABCG2 contributes to differences in intracellular concentrations Genes and gene variants were found to be associated with gemcitabine carboplatin induced toxicity in paper V The variants were partially validated and two models were developed to estimate the risk of leukopenia or neutropenia based on a set of genetic variants Lungcancer r den cancerform som leder till flest antal d dsfall runt om i v rlden Tyv rr uppt cks lungcancer oftast i ett sent skede n r m jligheten att bota cancer n r begr nsad Lungcancer kan behandlas med flera behandlingsmetoder antingen enskilt eller i
