

The Boscastle Flood 2004

by Phil Bull

Causes of the Flood

Physical Causes

The flood took Boscastle entirely by surprise - it was a flash flood event & the village is not prone to regular annual flooding as many locations affected by extreme flooding events are. In fact, the village had never experienced such a flood, suggesting that the flood was the result of a combination of exceptional factors.

A major factor is the location of the village, within the Valency valley. The Valency is normally a quiet stream, which follows a very steep course down into the valley from the hills around. The valley's structure is likely one of the most major physical factors, as its steepness accelerated the rainwater falling on the hills above the valley greatly as it travelled down to the valley floor where Boscastle stands. As well as causing the water to travel extremely quickly down the valley sides, the shape of the valley concentrated rainwater from the surrounding area into a relatively narrow space descending towards the valley bottom. Not only did this cause an increase in run-off speed, but also an increase in discharge volume, which was later to prove devastating in the confined river channel flowing through the village itself, which simply couldn't hold enough water to prevent the flooding which occurred.

Boscastle - within the Valency Valley. Note the steep slopes & narrow river channel, which allowed massive amounts of water to flow into the same place all at once
