

Chapter 3

Characteristics of the Driver, the Pedestrian, the Vehicle and the Road

3-1

Briefly describe the two types of visual acuity.

The two types of visual acuity are static and dynamic. The ability of a driver to identify an object when both the object and the driver are stationary depends on one's static acuity. Some factors that affect static acuity include the background brightness, contrast, and time. The ability of a driver to clearly detect a moving object depends on the driver's dynamic visual acuity.

3-2

**(a) What color combinations are used for regulatory signs (e.g. speed limit signs) and for general warning signs (e.g. advance railroad crossing signs)
(b) Why are these combinations used?**

Regulatory signs use a color combination of black lettering on white background, and advance warning signs use the color combination of black lettering on yellow background. These color combinations are used because they have been shown to be those to which the eye is most sensitive.

3-3

County and Township Roads, 1952 *Outdoor Lighting: Physics, Vision and Perception* Duco Schreuder, 2008-08-15 The present book is based on the experience of the author The experience is mainly the result of years of research of consulting work and in participation in policy decision making in many fields most but not all related to outdoor lighting To some degree the book represents the preference of the author The selection of the subjects is based on more than 50 years of experience of what is desirable to know for persons engaged in scientific research or practical application in the fields of lighting and vision The subjects deal with a number of fundamental aspects The theorists must have them at their fingertips whereas the practical engineers may assume them as known in their daily work The selection of subjects is based in part by the questions that came to the author over the years but even more by the preference of the author himself In this respect it is a personal book Thus it should be stressed that the book is not a handbook or even a textbook many subjects that commonly are treated in such books are not included here Not because they lack importance but because the author feels that they are adequately treated elsewhere Some relevant works are mentioned in the References Over the years the author has been engaged in giving courses on vision and lighting lately more in particular on Masterclasses on a post graduate or post doctorate level
