Autonomous Ships and the Law Henrik Ringbom, Erik Røsæg, Trond Solvang, 2020-12-02 Interest in autonomous ships has grown exponentially over the past few years Whereas a few years ago the prospect of unmanned and autonomous vessels sailing on the seas was considered unrealistic the debate now centers on when and in what format and pace the development will take place Law has a key role to play in this development and legal obstacles are often singled out as principal barriers to the rapid introduction of new technologies in shipping Within a few years autonomous ships have turned from a non issue to one of the main regulatory topics being addressed by the International Maritime Organization However the regulatory discussion is still in its infancy and while many new questions have been raised few answers have been provided to them to date Increased automation of tasks that have traditionally been undertaken by ships crews raises interesting legal questions across the whole spectrum of maritime law The first of its kind this book explores the issue of autonomous ships from a wide range of legal perspectives

including both private law and public law at international and national level making available cutting edge research which will be of significant interest to researchers in maritime law Chapter 3 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial CC BY NC 4.0 license

Planning and Tracking for Vehicle Collision Avoidance in Lateral and Longitudinal Motion Directions Jie Ji,Hong Wang,Yue Ren,2022-06-01 In recent years the control of Connected and Automated Vehicles CAVs has attracted strong attention for various automotive applications One of the important features demanded of CAVs is collision avoidance whether it is a stationary or a moving obstacle Due to complex traffic conditions and various vehicle dynamics the collision avoidance system should ensure that the vehicle can avoid collision with other vehicles or obstacles in longitudinal and lateral directions simultaneously The longitudinal collision avoidance controller can avoid or mitigate vehicle collision accidents effectively via Forward Collision Warning FCW Brake Assist System BAS and Autonomous Emergency Braking AEB which has been commercially applied in many new vehicles launched by automobile enterprises But in lateral motion direction it is necessary to determine a flexible collision avoidance path in real time in case of detecting any obstacle Then a path tracking

algorithm is designed to assure that the vehicle will follow the predetermined path precisely while guaranteeing certain comfort and vehicle stability over a wide range of velocities In recent years the rapid development of sensor control and communication technology has brought both possibilities and challenges to the improvement of vehicle collision avoidance capability so collision avoidance system still needs to be further studied based on the emerging technologies In this book we provide a comprehensive overview of the current collision avoidance strategies for traditional vehicles and CAVs First the book introduces some emergency path planning methods that can be applied in global route design and local path generation situations which are the most common scenarios in driving A comparison is made in the path planning problem in both timing and performance between the conventional algorithms and emergency methods In addition this book introduces and designs an up to date path planning method based on artificial potential field methods for collision avoidance and verifies the effectiveness of this method in complex road environment Next in order to accurately track the predetermined path for collision avoidance traditional control methods humanlike control strategies and intelligent approaches are discussed to solve the path tracking problem and ensure the vehicle successfully avoids the collisions In addition this book designs and applies robust control to solve the path tracking problem and verify its tracking effect in different scenarios Finally this book introduces the basic principles and test methods of AEB system for collision avoidance of a single vehicle Meanwhile by taking advantage of data sharing between vehicles based on V2X vehicle to vehicle or vehicle to infrastructure communication pile up accidents in longitudinal direction are effectively avoided through cooperative motion control of multiple vehicles
