*Philosophy of Microbiology* Maureen O'Malley, 2014-08-28 Microbes and microbiology are seldom encountered in philosophical accounts of the life sciences Although microbiology is a well established science and microbes the basis of life on this planet neither the organisms nor the science have been seen as philosophically significant This book will change that It fills a major gap in the philosophy of biology by examining central philosophical issues in microbiology Topics are drawn from evolutionary microbiology microbial ecology and microbial classification These discussions are aimed at philosophers and scientists who wish to gain insight into the basic philosophical issues of microbiology *The Oxford Handbook of Philosophy of Science* Paul Humphreys, Anjan Chakravartty, Margaret Morrison, Andrea Woody, 2016 This Handbook combines coverage of traditional areas in the philosophy of science such as causation explanation and theory structure with chapters on new areas such as philosophy of astronomy data complexity theory and emergence The articles are accessible to scientifically educated non philosophers as well as to philosophers *Brill's Companion to the Philosophy of Biology* Andrea Borghini, Elena Casetta, 2019-12-16 In this volume Andrea Borghini and Elena Casetta introduce a wide spectrum of key philosophical problems related to life sciences in a neat framework and an accessible style with a special emphasis on metaphysical issues The volume is divided into three parts The first addresses the two main questions stemming from life sciences what is life and what is the correct understanding of the theory of evolution The second part looks at metaphysical questions concerning biological entities environments species organisms and biological individuals The third part focuses on theoretical questions of particular ethical and political significance sex and gender the biotechnological revolution and the evolution of behavior and culture Each chapter is followed by a list of further readings **The Philosophy of Biology** Kostas Kampourakis, 2013-06-18 This book brings together for the first time philosophers of biology to write about some of the most central concepts and issues in their field from the perspective of biology education The chapters of the book cover a variety of topics ranging from traditional ones such as biological explanation biology and religion or biology and ethics to contemporary ones such as genomics systems biology or evolutionary developmental biology Each of the 30 chapters covers the respective philosophical literature in detail and makes specific suggestions for biology education The aim of this book is to inform biology educators undergraduate and graduate students in biology and related fields students in teacher training programs and curriculum developers about the current state of discussion on the major topics in the philosophy of biology and its implications for teaching biology In addition the book can be valuable to philosophers of biology as an introductory text in undergraduate and graduate courses **Individuation, Process, and Scientific Practices** Otávio Bueno, Ruey-lin Chen, Melinda Bonnie Fagan, 2018 This book provides novel perspectives grounded in scientific practices on individuality and individuation subjects traditionally treated by metaphysicians It connects the concepts of the individual and individuation with analyses of scientific experimentation and merges philosophy with scientific study in biology physics and chemistry

*The Tangled Tree* David Quammen, 2019-08-06 In this New York Times bestseller and longlist nominee for the National Book Award our greatest living chronicler of the natural world The New York Times David Quammen explains how recent discoveries in molecular biology affect our understanding of evolution and life's history In the mid 1970s scientists began using DNA sequences to reexamine the history of all life Perhaps the most startling discovery to come out of this new field the study of life's diversity and relatedness at the molecular level is horizontal gene transfer HGT or the movement of genes across species lines It turns out that HGT has been widespread and important we now know that roughly eight percent of the human genome arrived sideways by viral infection a type of HGT In *The Tangled Tree* the grandest tale in biology David Quammen presents the science and the scientists involved with patience candor and flair Nature We learn about the major players such as Carl Woese the most important little known biologist of the twentieth century Lynn Margulis the notorious maverick whose wild ideas about mosaic creatures proved to be true and Tsutomu Wantanabe who discovered that the scourge of antibiotic resistant bacteria is a direct result of horizontal gene transfer bringing the deep study of genome histories to bear on a global crisis in public health David Quammen proves to be an immensely well informed guide to a complex story The Wall Street Journal In *The Tangled Tree* he explains how molecular studies of evolution have brought startling recognitions about the tangled tree of life including where we humans fit upon it Thanks to new technologies we now have the ability to alter even our genetic composition through sideways insertions as nature has long been doing *The Tangled Tree* is a source of wonder Quammen has written a deep and daring intellectual adventure The Boston Globe

*Merleau-Ponty's Developmental Ontology* David Morris, 2018-10-15 Winner of the 2020 Edward Goodwin Ballard Prize in Phenomenology Merleau-Ponty's *Developmental Ontology* shows how the philosophy of Maurice Merleau-Ponty from its very beginnings seeks to find sense or meaning within nature and how this quest calls for and develops into a radically new ontology David Morris first gives an illuminating analysis of sense showing how it requires understanding nature as engendering new norms He then presents innovative studies of Merleau-Ponty's *The Structure of Behavior* and *Phenomenology of Perception* revealing how these early works are oriented by the problem of sense and already lead to difficulties about nature temporality and ontology that preoccupy Merleau-Ponty's later work Morris shows how resolving these difficulties requires seeking sense through its appearance in nature prior to experience ultimately leading to radically new concepts of nature time and philosophy Merleau-Ponty's *Developmental Ontology* makes key issues in Merleau-Ponty's philosophy clear and accessible to a broad audience while also advancing original philosophical conclusions **Creation**

**Through Evolution** Austriaco Op Nicanor Pier Giorgio, Nicanor Pier Giorgio Austriaco, 2024-11-29 Written and revised over the past three years *Creation through Evolution* contains ten new essays that directly respond to the most common philosophical and theological objections put forward by Catholics who are skeptical about evolutionary theory Significantly the authors use the conceptual framework of St Thomas Aquinas as a starting point to engage in the faith and science

dialogue and they take the Catechism of the Catholic Church as their starting point. The contributors believe that the solutions proposed by these essays to the disputed questions raised by skeptics are novel and robust. The contents of the essays were presented at colloquia at the University of Oxford and Providence College and were revised in response to criticisms and comments raised by the other participants at these meetings. The chapters were written to respond to Catholic skeptics of Darwinian evolution. They are meant to be read not only by scholars but also by graduate and undergraduate students. Creation through Evolution will be of interest to the informed Catholic reader who is struggling to reconcile evolutionary theory with the claims of the Catechism of the Catholic Church.

**Crafting Everyday Food** Angela Ki Che Leung, Hallam Stevens, 2025-07-31 Focusing on East Asia from the nineteenth century to the present, *Crafting Everyday Food* highlights the role of technology in transforming traditional foods into modern ones and in reinventing industrialized foods as heritage foods. The seven expert researchers adopt a unique technological perspective to trace the transformation of traditional fermented foodstuffs typical of the region: kimchi, soy sauce, *kji*, and tea, and the appropriation of new foods of nonlocal origin such as beef and potato into Asian diets. The essays discuss how modern technologies reconstructed traditional or authentic foods, showing how global flows of commodities, experts, and consumers, as well as the circulation of knowledge and practices, shaped the East Asian foodscape. Weaving together science and technology studies with historical studies, the volume generates innovative approaches to thinking about technological change, everyday life, and the foodways of East Asia as a region. Understanding how these technological evolutions have transformed food production and consumption provides new insights into the complex processes of industrialization and the roles of taste and heritage in East Asian modernity. Each chapter takes up a unique food item with its own complex past and traces gradual and at times dramatic change, allowing new relationships to emerge between the creators, consumers, and their surrounding world. Truly multidisciplinary in approach, Leung and Stevens bring together scholars and methods from a range of fields into a coherent transnational dialogue, resulting in an innovative way to define East Asia without relying on geographic or linguistic boundaries. The study of everyday foods consumed by ordinary people on a day-to-day basis provides a productive perspective for understanding East Asian cultures as sociotechnical systems, pushing back the role of elite and special foods as privileged objects in the discipline of food studies.

*Philosophy of Systems Biology* Sara Green, 2016-12-15 The emergence of systems biology raises many fascinating questions: What does it mean to take a systems approach to problems in biology? To what extent is the use of mathematical and computational modelling changing the life sciences? How does the availability of big data influence research practices? What are the major challenges for biomedical research in the years to come? This book addresses such questions of relevance not only to philosophers and biologists but also to readers interested in the broader implications of systems biology for science and society. The book features reflections and original work by experts from across the disciplines, including systems biologists, philosophers, and interdisciplinary scholars investigating the social and

educational aspects of systems biology In response to the same set of questions the experts develop and defend their personal perspectives on the distinctive character of systems biology and the challenges that lie ahead Readers are invited to engage with different views on the questions addressed and may explore numerous themes relating to the philosophy of systems biology This edited work will appeal to scholars and all levels from undergraduates to researchers and to those interested in a variety of scholarly approaches such as systems biology mathematical and computational modelling cell and molecular biology genomics systems theory and of course philosophy of biology

*COVID-19 Pandemic - Philosophical Approaches* Nicolae Sfetcu, 2020 The paper begins with a retrospective of the debates on the origin of life the virus or the cell The virus needs a cell for replication instead the cell is a more evolved form on the evolutionary scale of life In addition the study of viruses raises pressing conceptual and philosophical questions about their nature their classification and their place in the biological world The subject of pandemics is approached starting from the existentialism of Albert Camus and Sartre the replacement of the exclusion ritual with the disciplinary mechanism of Michel Foucault and about the Gaia hypothesis developed by James Lovelock and supported in the current pandemic by Bruno Latour The social dimensions of pandemics their connection to global warming which has led to an increase in infectious diseases and the deforestation of large areas which have caused viruses to migrate from their native area their reservoir are highlighted below The ethics of pandemics is approached from several philosophical points of view of which the most important in a crisis of such global dimensions is utilitarianism which involves maximizing benefits for society in direct conflict with the usual Kantian view of respect for people as individuals After a retrospective of the COVID 19 virus that caused the current pandemic its life cycle and its history with an emphasis on the philosophy of death the concept of biopower initially developed by Foucault is discussed with reference to the practice of modern states of control of the populations and the debate generated by Giorgio Agamben who states that what is manifested in this pandemic is the growing tendency to use the state of emergency as a normal paradigm of government An interesting and much debated approach is the one generated by the works of Slavoj Žižek who states that the current pandemic has led to the bankruptcy of the current barbaric capitalism wondering if the path that humanity will take is a neo communism Another important negative effect is desocialization with the conclusion of some philosophers that we cannot exist independently of our relationships with others that a person's humanity depends on the humanity of those around him The last section is dedicated to forecasting what the world will look like after the pandemic and there are already signs of a paradigm shift including the sudden disappearance of the wall ideology a cough was enough to make it suddenly impossible to avoid the responsibility that every individual has it towards all living beings for the simple fact that he is part of this world and of the desire to be part of it The whole is always involved in part because everything is in a sense in everything and in nature there are no autonomous regions that are an exception The COVID 19 pandemic seems to restore the supremacy that once belonged to politics One of the virtues of the virus is its ability to generate a more sober idea of freedom

to be free means to do what needs to be done in a specific situation

**Microbes** Phillip K. Peterson, 2020-08-08 This is the only book that tells both sides of the story of germs that they are critically important for our health and that the dangers of emerging pathogens continue to wreak havoc in our bodies and around the world With straight forward and engaging writing infectious diseases physician Phillip Peterson surveys how our understanding of viruses has changed throughout history from early plagues and pandemics to more recent outbreaks like HIV AIDS Ebola Zika and Coronavirus Microbes also takes on contemporary issues like the importance of vaccinations in the face of the growing anti vaxxer movement as well as the rise of cutting edge health treatments like fecal transplants Peterson relays his first hand experience dealing with an unprecedented emergence of new microbial threats Yet at the same time he has witnessed the astounding recent discoveries of the crucial role of the microbes that colonize our body surfaces in human health Microbes explains for general readers where these germs came from what they do to and for us and what can be done to stop the bad actors and foster the benefactors

**Microscopy, Magnification and Modernist Fiction** Patrick Armstrong, 2024-12-26 Exploring how modernism registered shock experiences of the microscopic and extended vision in prose fiction through the work of four modernist writers D H Lawrence Marcel Proust Virginia Woolf and Samuel Beckett this book is the first substantial study of the interrelations between microscopy and modernist fiction Illustrating ways in which optical instruments had the capacity to change displace and reframe ideas of what the world is like this book argues that encounters with the microscopic are often depicted as thresholds between the human and the non human in ways that reverberate through modernist fiction Exploring a period of significant developments in microscopical tools and techniques from the light microscope to the electron microscope this book traces a shift that reconfigured the limits of the observable

Individuals Across the Sciences Alexandre Guay, Thomas Pradeu, 2016 Knowing what individuals are and how they can be identified is a crucial question for both philosophers and scientists This volume explores how different sciences handle the issue of understanding individuality and reflects back on how this scientific work relates to metaphysics itself

Solidarities with the Non/Human, or, Posthumanism in Literature Stefan Herbrechter, 2024-11-18 This volume collects essays written over the last decade by one of the founders and leading figures of the theoretical movement of critical posthumanism The readings of literary texts gathered here from Shakespeare Keats Camus Vittorini Kundera Haushofer Atwood Eagleman Crace and DeLillo focus on posthumanist moments in which questions of postanthropocentrism and the nonhuman become prominent are negotiated and

ultimately foreclosed They show how a deconstructively minded way of reading humanistically motivated texts can help making these texts relevant for our so called posthuman times In doing so these critical posthumanist readings demonstrate that literature remains one of the privileged cultural institutions and practices from which solidarities both with and between the human and nonhuman can be formed and negotiated **The Nature of Classification** J. Wilkins, M. Ebach, 2013-11-27 Discussing the generally ignored issue of the classification of natural objects in the philosophy of science this book focuses on knowledge and social relations and offers a way to understand classification as a necessary aspect of doing science

Reductive Explanation in the Biological Sciences Marie I. Kaiser, 2015-12-16 This book develops a philosophical account that reveals the major characteristics that make an explanation in the life sciences reductive and distinguish them from non reductive explanations Understanding what reductive explanations are enables one to assess the conditions under which reductive explanations are adequate and thus enhances debates about explanatory reductionism The account of reductive explanation presented in this book has three major characteristics First it emerges from a critical reconstruction of the explanatory practice of the life sciences itself Second the account is monistic since it specifies one set of criteria that apply to explanations in the life sciences in general Finally the account is ontic in that it traces the reductivity of an explanation back to certain relations that exist between objects in the world such as part whole relations and level relations rather than to the logical relations between sentences Beginning with a disclosure of the meta philosophical assumptions that underlie the author's analysis of reductive explanation the book leads into the debate about reductionism in the philosophy of biology and continues with a discussion on the two perspectives on explanatory reduction that have been proposed in the philosophy of biology so far The author scrutinizes how the issue of reduction becomes entangled with explanation and analyzes two concepts the concept of a biological part and the concept of a level of organization The results of these five chapters constitute the ground on which the author bases her final chapter developing her ontic account of reductive explanation

**Haunted Nature** Sladja Blazan, 2021-12-08 This volume is a study of human entanglements with Nature as seen through the mode of haunting As an interruption of the present by the past haunting can express contemporary anxieties concerning our involvement in the transformation of natural environments and their ecosystems and our complicity in their collapse It can also express a much needed sense of continuity and relationality The complexity of the question who and what gets to be called human with respect to the nonhuman is reflected in these collected chapters which in their analysis of cinematic and literary representations of sentient Nature within the traditional gothic trope of haunting bring together history race postcolonialism and feminism with ecocriticism and media studies Given the growing demand for narratives expressing our troubled relationship with Nature it is imperative to analyze this contested ground Chapter 6 is available open access under a Creative Commons Attribution 4.0 International License via [link.springer.com](https://link.springer.com) The Postworld In-Between Utopia and Dystopia Katarzyna Ostalska, Tomasz Fisiak, 2021-12-29 This collection of essays offers global perspectives on feminist utopia

and dystopia in speculative literature film and art working from a range of intersectional approaches to examine key works and genres in both their specific cultural context and a wider global epistemological critical background The international diverse contributions including a Foreword by Gregory Claeys draw upon posthumanism speculative realism speculative feminism object oriented ontology new materialisms and post Anthropocene studies to propose alternative perspectives on gender environment as well as alternate futures and pasts rendered in fiction Instead of binary divisions into utopia vs dystopia the collection explores genres transcending this dichotomy scrutinising the oeuvre of both established and emerging writers directors and critics This is a rich and unique collection suitable for scholars and students studying feminist literature media cultural studies and women s and gender studies
