Sven Plein, John Greenwood, John P Ridgway, 2015-09-15 The book provides an introduction to CMR imaging that is understandable and focused on the relevant information needed to using CMR imaging in clinical practice Cardiovascular magnetic resonance CMR imaging has become an established imaging modality with an expanding range of clinical indications While in the past the availability of CMR imaging was limited to a few specialist centres the method is becoming more widely available Most clinicians therefore need to have a general understanding of the diagnostic information that can be obtained from CMR imaging the indications for referral as well as contraindications and limitations of the method For

cardiologists and radiologists in particular CMR imaging will become a routine diagnostic tool and training curricula in Cardiology or Radiology reflect this trend by increasingly demanding training in CMR imaging

Van Der Geest, Yucheng Chen, Peng Hu, Ming Yen Ng, 2024-08-28 In the past decades advanced quantitative indexes obtained by cardiovascular magnetic resonance imaging CMRI such as myocardial strain myocardial T1 ECV T2 T2 relaxation value myocardial blood flow quantification index and hemodynamics indexes have been proposed as an alternative for non invasive quantitative evaluation in various cardiovascular diseases Those quantitative indexes have been proven to be more sensitive in assessing the early change of

myocardial tissue ventricular function or hemodynamics compared to the conventional qualitative methods. However, there are many challenges in the accurate measurement of those indexes as well as the evaluation of their clinical significance in the diagnosis and prognosis of a certain disease. Besides, quality control and standardization of those indexes become crucial when promoting them into clinical practice. This Research Topic will offer comprehensive reviews and original research articles of the newly emerged quantitative CMRI methods and the clinical insights of the diagnostic and prognostic value of those advanced CMRI indexes. CMRI techniques such as myocardial strain analysis, quantitative myocardial tissue mapping, 2-dimensional, 4-dimensional flow quantification, and quantitative perfusion will be of our interest. The aim of this Research Topic will be to highlight the promising technical improvements in the accurate measurement of the CMRI indexes and/or the added value of those indexes in disease diagnosis and prognosis. Meanwhile, quality control and standardization of the advanced CMRI indexes in multi-centre, multi-vendor research projects will be discussed.
