Great Britain: Parliament: House of Lords: Science and Technology Committee,2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools **Collecting for the Curriculum**
Amy J. Catalano,2015-09-28 If you're a librarian charged with collecting curriculum materials and children's literature to support the Common Core State Standards then this book the only one that offers explicit advice on collection development in curriculum collections is for you While there are many publications on the Common Core for school librarians and K-12 educators no such literature exists for curriculum librarians at the post secondary level This book fills that gap standing alone as a guide to collection development for curriculum librarians independent of the Common Core State Standards CCSS The book provides instruction and guidance to curriculum librarians who acquire and manage collections so you can develop a collection based on best practices The book begins with a primer on the CCSS and how curriculum librarians can support them Discussion of the Standards is then woven through chapters arranged by content area that share research based practices in curriculum development and instruction to guide you in curriculum selection Material types covered include games textbooks children's literature primary sources counseling and nonfiction Additional chapters cover the management of curriculum collections testing collections and instruction and reference as well as how to support and collect for special needs learners Current practices in collection development for curriculum materials librarians are also reviewed The book closes with a discussion of the future of curriculum materials *OECD Economic Surveys: Brazil 2020* OECD,2020-12-16
The COVID-19 pandemic has caused severe human suffering and triggered a deep recession in Brazil Economic policies reacted in a timely and decisive manner to the crisis supporting millions of Brazilians But a strong and inclusive recovery from the recession will require long lasting improvements in economic policies Improving fiscal outcomes remains one of Brazil's principal challenges given a high debt burden to which the pandemic has added significantly Public spending will

need to become more efficient including by building on past progress in the fight against corruption and economic crimes Social protection can be strengthened through a better focus on the most effective policies and benefits which could allow significant reductions in inequality and poverty Stronger growth will hinge on raising productivity which has been virtually stagnant for decades This requires addressing underlying policy challenges including reducing regulatory burdens reforming taxes strengthening judicial efficiency and fostering a stronger integration into the global economy Raising productivity implies reallocations and structural changes in the economy which should be accompanied by well designed training and education policies Training with a strong focus on local skill demand can help workers master the transition and seize new opportunities to move into better jobs

The Robot Factory Joseph Ganem,2018-08-27 This book exposes a disturbing misuse of the scientific method to advance policies and agendas that are in fact detrimental to both science and education The author a physics professor examines two related trends in education the practice of data driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology Many of the reforms being foisted on educators have more in common with pseudo science than real science The reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an impoverished and stunted understanding of science in particular and of education in general How is it possible for schools with all students learning at grade level to be rated as failing teachers to be rated as ineffective after all their students meet their learning outcomes rising grade school math standards to result in more college students needing remedial math politicians to disparage scientists and their results but argue that more students should study science These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting

education policies This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students *A Disease Called Childhood* Marilyn Wedge, 2016-03-15 Since 1987 the number of American children diagnosed with ADHD has jumped from 3 to 11 percent Meanwhile ADHD rates remain relatively low in other countries such as France Finland the UK and Japan where the number of children diagnosed with and medicated for ADHD is 1 percent or less Alarmed by this trend family therapist Marilyn Wedge set out to understand how ADHD became an American epidemic and to find out whether there are alternative treatments to powerful prescription drugs *Message of the President of the United States Transmitting the Budget for the Service of the Fiscal Year Ending ...* United States, 1938 *Occupations of Federal White-collar Workers*, 1957 *The Growing Gap in Life Expectancy by Income* National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Division of Behavioral and Social Sciences and Education, Committee on Population, Committee on the Long-Run Macroeconomic Effects of the Aging U.S. Population--Phase II, 2015-09-17 The U S population is aging Social Security projections suggest that between 2013 and 2050 the population aged 65 and over will almost double from 45 million to 86 million One key driver of population aging is ongoing increases in life expectancy Average U S life expectancy was 67 years for males and 73 years for females five decades ago the averages are now 76 and 81 respectively It has long been the case that better educated higher income people enjoy longer life expectancies than less educated lower income people The causes include early life conditions behavioral factors such as nutrition exercise and smoking behaviors stress and access to health care services all of which can vary across education and income Our major entitlement programs Medicare Medicaid Social Security and Supplemental Security Income have come to deliver disproportionately larger lifetime benefits to higher income people because on average they are increasingly collecting those benefits over more years than others This report studies the impact the growing gap in life expectancy has on the present value of lifetime benefits that people with higher or lower earnings will receive from major entitlement programs The analysis presented in *The Growing Gap in Life Expectancy by Income* goes beyond an examination of the existing literature by providing the first comprehensive estimates of how lifetime benefits are affected by the changing distribution of life expectancy The report also explores from a lifetime benefit perspective how the growing gap in longevity affects traditional policy analyses of reforms to the nation's leading entitlement programs This in depth analysis of the economic impacts of the longevity gap will inform debate and assist decision makers economists and researchers
