*Front side*

Header: Check either the original or copy box to indicate this is the original note or a copy of the note. A copy is often required to send with a patient.

Section 1), 2), 3) – lists the steps to approach a patient and perform the Primary Survey looking for immediate life threats. The primary survey is in the order in which it should be performed and in order of treatment priority. For example clearing an airway takes precedence over a possible spinal injury.

4) General – basic information on the responders and patient.

5) Subjective – information the patient tells you about the NOI (nature of injury) and MOI (mechanism of injury). What happened, how it happened and where it hurts? The pain description on the right side should be used to get as much detailed information about the injury as possible.

Mechanism for Spinal Injuries – the specific criteria for a traumatic incident to possibly cause a spinal injury. If a traumatic incident does not have one or more of these elements present a spinal injury is unlikely and you check no in the MOI for spine in the subjective section. If the patient is unconscious you should assume a spinal injury until the clear spine procedure at the bottom of the page is performed (clear spine is Wilderness Only protocol). Spinal injuries require immobilization of the spine and neck.

6) Objective – information that you observe as a caregiver doing your primary and secondary survey. A secondary survey should include; vital signs, head to toe exam and AMPLE patient history. The table at the top of the section provides space for time and the five main wilderness vital signs (level of consciousness with scale, Respiration rate and effort with normal and help values, heart rate and effort with normal values, skin color temperature and moisture with abbreviations and eyes with abbreviation). There is additional space for vital signs on the back of the form. There is also space for
