

Social Network Essay

Social network essay Social networking can be a useful tool for keeping in touch with friends and family but when it is used to substitute it for actual face to face contact it can be a dangerous thing. You can't lie; social networking is a very large part of our lives. In September 2011 Facebook registered 800 million users. Social networking can have good effects on people and help them out but it can be used inappropriately and can have very disastrous effects on people's friends that you want's lives.

Social networking may have some cons but if used properly it can be a very useful device. When used properly it can help you stay in touch with people you wouldn't normally be able to like friends or family overseas. Instead of having to call or write a letter you can just talk over the internet. It may not only be family or friends that you want to talk to, there might be someone that you like but don't have the confidence to talk to them. You can build up your confidence over the internet and not worry about stumbling over your words.

One of the arguments that people who are against social networking is that it can reduce face to face contact but if you use it well then it can actually increase it. You can organise things very easily compared to other ways like over the phone. Things like Facebook can be very helpful if used right but that can be the problem. People may feel they are being social but online interaction is no substitute for face to face contact. "Facebook is a tool. I compare it to a car; you can drive to isolate yourself from others or you can drive to meet people.

If you use Facebook to increase face-to-face contact, it increases social capital. " It can help people but only if you do the right thing. This can be a really bad thing about social networking, it can promote loneliness. People will feel as though they are being really social but really they are becoming lonelier. People will feel as though no one really knows who they are and what they are really like. It can make people even worse when they see a new photo album or post saying "best day eva" tagged with some friends. That can make people feel left out and not part of a group.

It can make people jealous of others and why they didn't get invited. It isn't always accidental when people get hurt though. Social networking can be good if it is used correctly but the problem is a lot of people don't. People don't always realise that posting something when you ten or fifteen can come back to hurt you when you are twenty-five. You could do something or have photos of you on Facebook when you were younger and then you are going for a job and they find it you could end up missing the job just because of that. It can give kids a much easier way to bully their peers.

In the schoolyard you can have teachers around to stop it but over the internet there isn't someone there to stop it. You do have to be careful about w

Social Network Analysis. An Introduction Ioannis Panges, 2017-07-27 Scientific Essay from the year 2016 in the subject Sociology Basics and General language English abstract The concept of social networks and their methods of analysis have attracted the interest and curiosity of researchers in the social sciences and behavioral sciences over the past decades Most of this interest in analyzing social networks focuses on understanding the relationships between social structures as well as the patterns and impacts of these relationships Many researchers have recognized that the analysis of networks brings a new impetus to the answer of the classical research questions of sociology and behavioral sciences giving precise formal definitions of the political economic or social structural environment From the point of view of the analysis of social networks the social environment can be expressed through graphs in the relations between the interacting units

Essays on Signaling and Social Networks Tomas Rodriguez Barraquer, 2011 Over the last few decades some analytic tools intensely used by economics have produced useful insights in topics formerly in the exclusive reach of other social sciences In particular game theory justifiable from either a multi person decision theoretic perspective or from an evolutionary one often serves as a generous yet sufficiently tight framework for interdisciplinary dialogue The three essays in this collection apply game theory to answer questions with some aspects of economic interest The three of them have in common that they are related to topics to which other social sciences specially sociology have made significant contributions While working within economics I have attempted to use constructively and faithfully some of these ideas Chapter 1 coauthored with Xu Tan studies situations in which a set of agents take actions in order to convey private information to an observing third party which then assigns a set of prizes based on its beliefs about the ranking of the agents in terms of the unobservable characteristic These situations were first studied using game theoretic frameworks by Spence and Akerlof in the early seventies but some of the key insights date back to the foundational work of Veblen In our analysis we focus on the competitive aspect of some of these situations and cast signals as random variables whose distributions are determined by the underlying unobservable characteristics Under this formulation different signals have inherent meanings preceding any stable conventions that may be established We use these prior meanings to propose an equilibrium selection criterion which significantly refines the very large set of sequential equilibria in this class of games In Chapter 2 coauthored with Matthew O Jackson and Xu Tan we study the structure of social networks that allow individuals to cooperate with one another in settings in which behavior is non contractible by supporting schemes of credible ostracism of deviators There is a significant literature on the subject of cooperation in social networks focusing on the role of the network in transmitting the information necessary for the timely punishment of deviators and deriving properties of network structures able to sustain cooperation from that perspective Ours is one of the first efforts to understand the network restrictions that emerge purely from the credibility of ostracism carefully considering the implications that the dissolution of any given relationship may have over the

sustainability of other relations in the community In Chapter 3 I study the sets of Pure Strategy Nash equilibria of a variety of binary games of social influence under complete information In a game of social influence agents simultaneously choose one of two possible strategies to be inactive or be active and the optimal choice depends on the strategies of the agents in their social environment Different social environments and assumptions on the way in which they influence the behavior of the agents lead to different classes of games of varying degrees of tractability In any such game an equilibrium can be described by the set of agents that are active and the full set of equilibria can be thus represented as a collection of subsets of the set of agents I build the analysis of each of the classes of games that I consider around the question What collections of sets are expressible as the set of equilibria of some game in the class I am able to provide precise answers to these questions in some of the classes studied and in other cases just some pointers
