Principles of Research in Behavioral Science Bernard E. Whitley, Jr., Mary E. Kite, 2012-11-12 Intended for beginning graduate or advanced undergraduate students this book

provides a comprehensive review of research methods used in psychology and related disciplines. It covers topics that are often omitted in other texts including correlational and qualitative research and integrative literature reviews. Basic principles are reviewed for those who need a refresher. The focus is on conceptual issues; statistics are kept to a minimum. Featuring examples from all fields of psychology, the book addresses laboratory and field research. Chapters are written to be used independently so instructors can pick and choose those that fit their course needs. Reorganized to parallel the steps of the research process, tips on writing reports are also provided. Each chapter features an outline, key terms, a summary, and questions and exercises that integrate chapter topics and put theory into practice. A glossary and an annotated list of readings are now included. Extensively updated throughout, the new edition features a new co-author, Mary Kite, and new chapters on qualitative research and content analysis and another on integrative literature reviews including meta-analysis, critical techniques for today's research environment. A new chapter on exploratory and confirmatory factor analysis that addresses the use of path analysis and structural equation modeling. A new chapter on how to write a research report using APA style. Examples from cross-cultural and multi-cultural research, neuroscience, cognitive and developmental psychology, along with ones from social, industrial and clinical psychology. More on Internet research and studies. Greatly expanded Part 3 on research designs with chapters on true experiments, field research, correlational and single case designs, content analysis and survey and qualitative research. A website with PowerPoint slides for each chapter, a test bank with short answer and multiple choice questions, additional teaching resources, and the tables and figures from the book for instructors, and chapter outlines, suggested readings, and links to related web sites for students. Intended as a text for beginning graduate and/or advanced undergraduate courses in research methods or experimental methods or design taught in psychology, human development, family studies, education, or other social and behavioral sciences, a prerequisite of undergraduate statistics and a beginning research methods course is assumed.

Being Human: Relationships and You Knud S. Larsen, Reidar Ommundsen, Kees van der Veer, 2015-04-08. This book represents a new look at social psychology and relationships for the discerning reader and university student. The title of the book argues forcefully that the very nature of being human is defined by our relationships with others: our lovers, family, and our functional or dysfunctional interactions. Written in easy-to-follow logical progression, the volume covers all major topical areas of social psychology with results of empirical research of the most recent years included. A common project between American and European social psychologists, the book seeks to build a bridge between research findings in both regions of the world. In doing so, the interpretations of the research take a critical stand toward dysfunction in modern societies and, in particular, the consequences of endless war and repression. Including topics as varied as an overview of the theoretical domains of social psychology and recent research on morality, justice, and the law, the book promises a stimulating introduction to contemporary views of what it means to be human. A major emphasis of the book is the effect of culture in all major topical areas of social psychology, including conceptions of the

self attraction relationships and love social cognition attitude formation and behavior influences of group membership social influence persuasion hostile images aggression and altruism and moral behavior
