Solar Versus Nuclear Choosing Energy Futures Thomas B Johansson:

Solar Versus Nuclear Mans Lönnroth, Thomas B. Johansson, Peter Steen, 2013-10-22 Solar Versus Nuclear Choosing Energy Futures study is an eight chapter text that studies the long term implications of Sweden's decisions to explore nuclear energy and other alternative development options Sweden's high standards of living energy intensive industries advanced technology in many fields strong tradition of electrification and a competent utility organization abundant reserves of admittedly low grade uranium low population density and a large number of suitable reactor sites make nuclear energy seemed ideal Chapter I deals with some different ways of describing and viewing energy while Chapter 2 analyzes the earlier changes of energy sources in an attempt to describe the relations between the development of society and energy consumption Chapter 3 is concerned with the durability and other essential characteristics of these energy sources Chapter 4 discusses two distinct developments one leads to a Nuclear Sweden with its energy supply based chiefly on uranium and the other to a Solar Sweden based on renewable energy sources This chapter compares the characteristics and costs of the two alternatives and discusses the possibilities of combining them Chapter 5 covers the possible developmental tendencies built into the present energy policy and Chapter 6 looks into the proposals for a conceivable transitional solution for the 1980's which could reduce the dependence on oil while preserving both the solar and nuclear option as possible alternatives Chapter 7 discusses the organizational changes in energy conservation and energy production Lastly Chapter 8 considers some questions regarding the effect of the energy systems on the long term development of society Decentralized Energy Paul P. Craig, 2019-03-04 The question of decentralization of energy sources goes to the heart of the energy choices before the United States but conflicting viewpoints have clouded the issue in recent years This volume cuts through the rhetoric to address specific issues involving local control over energy sources and energy uses including environmental aspects of decentralized and centralized energy supply systems energy conservation and its relation to energy decentralization behavior values and energy choices institutional issues affecting the commercialization of solar energy especially in cities issues of decentralized and conventional energy supply choices in Sweden and methods by which decentralized energy systems have been studied Most importantly each of the papers in this collection considers social and institutional concerns as well as technical and economic issues *Environment, Energy and Natural Resource Management in the Baltic Region* Jes Fenger, Kirsten Halsnæs, Hans Larsen, Henning Schroll, Victor Vidal, 1991 **Beyond Transnationalism** Sonja Levsen, Kiran Klaus Patel, 2023-05-22 This book is a collection of case studies that provides fresh insights into the history of political activism in Europe's long 1970s It covers the full spectrum of such groups from the far left to the neofascist right and from the various parts of Europe including East and West The chapters in this book push the boundaries of our knowledge with regard to transnational spaces For many political activists at the time identifying with a transnational or global protest movement provided both legitimacy for their claims and stood for the promise of sweeping change Existing research has

often reproduced such perceptions This book goes beyond such an approach by distinguishing between different forms of transnational spaces More specifically it recognizes important differences between imagined spaces of solidarity and belonging spaces of knowledge circulation and spaces of social experience and political action Each chapter uses this new framework and analyses the interrelationship and significance of each of these three spaces Beyond Transnationalism will be of particular interest to historians political scientists and educators The chapters in this book were originally published as a special issue of European Review of History

Wood Joachim Radkau,2013-12-23 tzi the iceman could not do without wood when he was climbing his Alpine glacier nor could medieval cathedral builders or today s construction companies From time immemorial the skill of the human hand has developed by working wood so much so that we might say that the handling of wood is a basic element in the history of the human body The fear of a future wood famine became a panic in the 18th century and sparked the beginnings of modern environmentalism This book traces the cultural history of wood and offers a highly original account of the connection between the raw material and the human beings who benefit from it Even more it shows that wood can provide a key for a better understanding of history of the peculiarities as well as the varieties of cultures of a co evolution of nature and culture and even of the rise and fall of great powers Beginning with Stone Age hunters it follows the twists and turns of the story through the Middle Ages and the Industrial Revolution to the global society of the twenty first century in which wood is undergoing a varied and unexpected renaissance Radkau is sceptical of claims that wood is about to disappear arguing that such claims are self serving arguments promoted by interest groups to secure cheaper access to and control over wood resources The whole forest and timber industry often strikes the outsider as a world unto itself a hermetically sealed black box but when we lift the lid on this box as Radkau does here we will be surprised by what we find within Wide ranging and accessible this rich historical analysis of one of our most cherished natural resources will find a wide readership
