*Sex, Lies, and Brain Scans* Barbara J. Sahakian, Julia Gottwald, 2016-11-24 The recent explosion of neuroscience techniques has proved to be game changing in terms of understanding the healthy brain and in the development of neuropsychiatric treatments One of the key techniques available to us is functional magnetic resonance imaging fMRI which allows us to examine the human brain non invasively and observe brain activity in real time Through fMRI we are beginning to build a deeper understanding of our thoughts motivations and behaviours Recent reports that some patients who have all indications of being in a persistent vegetative state actually show conscious awareness and were able to communicate with researchers demonstrate perhaps the most remarkable and dramatic use of fMRI But this is just the most striking of a number of areas in which fMRI is being used to read minds albeit in a very limited way As neuroscientists unravel the regions of the brain involved in reward and motivation and in romantic love we are likely to develop the capacity to influence responses such as love using drugs fMRI studies have also been used to indicate that many people who would not regard themselves as racist show a racial bias in their emotional responses to faces of another racial group Meanwhile the reliability of fMRI as a lie detector in murder cases is being debated what if the individual simply believes falsely that he or she committed a murder *Sex Lies and Brain Scans* takes readers beyond the media headlines Barbara J Sahakian and Julia Gottwald consider what the technique of fMRI entails and what information it can give us showing which applications are possible today and which ones are science fiction They also consider the important ethical questions these techniques raise Should individuals applying for jobs as teachers or judges be screened for unconscious racial bias What if the manipulation of love using love potions was misused for economic or military ends How far will we allow neuroscience to go It is time to make up our minds

Gender and Our Brains Gina Rippon,2019-08-27 A breakthrough work in neuroscience and an incisive corrective to a long history of damaging pseudo science finally debunking the myth that there is a biological distinction between male and female brains For decades if not centuries science has backed up society s simple dictum that

men and women are hardwired differently that the world is divided by two different kinds of brains male and female However new research in neuroimaging suggests that this is little more than neurotrash In this powerfully argued work acclaimed professor of neuroimaging Gina Rippon finally challenges this damaging myth by showing how the science community has engendered bias and stereotype by rewarding studies that show difference rather than sameness Drawing on cutting edge research in neuroscience and psychology Rippon presents the latest evidence which finally proves that brains are like mosaics comprised of both male and female components and that they remain plastic adapting throughout the course of a person s life Discernable gender identities she asserts are shaped by society where scientific misconceptions continue to be wielded and perpetuated to the detriment of our children our own lives and our culture [How Our Brain Became Human](#)

Yanko A. Yankov MD PhD.,2022-10-18 The human brain growth and evolution have been subjects of many genetic environmental or social studies separately Additionally there are very few available sources on the complex role of our microbiome and the recently discovered hormones VIP and PACAP The book author also describes some of his cases seen during his long clinical experience to illustrate different points of his extensive literature review The book is divided into seven chapters condensing the author s scientific opinion on the growth and evolution of the human brain the organ that differentiates us from all other species He does not dismiss any other opinions or beliefs The author challenges scientists and clinicians to continue researching the brain without prejudice At the end he gives his opinion on how our BIG brains can help us live better together
