Social Perception from Individuals to Groups Steven J. Stroessner, Jeffrey W. Sherman, 2015-02-11 This volume focuses on social perception the processing of information about people This issue has always been central to social psychology but this book brings together literatures that in large part have been separated by the nature of the social target that is involved Historically research on person perception developed quite independently from research involving perceptions of groups Whereas the former research generally focused on the cognitive processes involved in forming impressions of individuals research on group perception examined the content of stereotypes and the conditions under which they are used in social judgment There was been little overlap in the theories and methods of these subfields and different researchers were central in each The chapters in this book highlight research and theorizing about social perception exploring the processes involved in social perception from persons to groups Some chapters describe work that was originally developed in person perception but is being extended to understanding groups Other chapters illustrate how some processes studied in the domain of stereotyping also affect perceptions of individual persons Finally other chapters focus on variables that affect perceptions and judgments of both individuals and groups proving opportunities for greater recognition of the common set of factors that are central to all types of social perception This groundbreaking book highlights the research contributions of David L Hamilton whose research has played a central role in uniting these previously independent areas of research It provides essential reading for upper level courses on social cognition or social perception and could also serve as an auxiliary text in courses on interpersonal perception relations and courses on stereotyping intergroup relations

Rubin, William M. Bukowski, Brett Laursen, 2011-01-31 This comprehensive authoritative handbook covers the breadth of theories, methods and empirically based findings on the ways in which children and adolescents contribute to one another's development. Leading researchers review what is known about the dynamics of peer interactions and relationships from infancy through adolescence. Topics include methods of assessing friendship and peer networks, early romantic relationships, individual differences and contextual factors in children's social and emotional competencies and behaviors, group dynamics and the impact of peer relations on achievement, social adaptation and mental health. The book begins with an extended introduction summarizing the state of the art in risk perception research and core issues of cross cultural comparisons. The main body of the book consists of four cross cultural studies on public attitudes towards risk in different countries including the United States, Australia, New Zealand, France, Germany, Sweden, Bulgaria, Romania, Japan and China. The last chapter critically discusses the main findings from these studies and proposes a framework for understanding and investigating cross cultural risk perception. Finally, implications for communication, regulation and management are outlined. The two editors, sociologist Ortwin Renn, Center of Technology Assessment, Germany and psychologist Bernd Rohrmann, University of Melbourne, Australia, have been engaged in risk research for the last three decades. They both have written extensively on this subject and provided new empirical and theoretical insights into the growing body of international risk perception research.
