1. Description of behavior

Second, impression formation

In real life, we will always face how to quickly and accurately form an impression of others and how to leave a good impression on others, this article mainly focuses on showing you the relevant theory of impression formation, that is, the definition of impression and impression formation, the rules, influencing factors, formation methods and psychological effects of impression formation. Through the reading of this article, it will help everyone how to grasp the formation of impressions in the process of communication.

Definition of impression: refers to the image or concept of another person retained in the individual's memory.

Impression formation: the process of summarizing and synthesizing several meaningful characteristics of a person to form an overall impression with concluding significance. Impression formation is a way for people to adapt to new social situations. In general, we first form a first impression of it based on limited information, then collect relevant information and integrate it to form an overall impression. Impression contains the salient characteristics of people about various aspects of the cognitive object, and it reflects the overall characteristics of the object. Social psychology generally believes that an individual's general impression of others is formed on the basis of very limited information materials, and individuals have an instinctive willingness to measure the intelligence, age, experience background, race, religion, cultural level, honesty, enthusiasm, etc. of the others they see, and further express their attitude towards him - like or dislike. So, how are impressions formed?

Artifacts in Behavioral Research Robert Rosenthal, Ralph L. Rosnow, 2009-08-03 This new

combination volume of three books in one dealing with the topic of artifacts in behavioral research was designed as both introduction and reminder. It was designed as an introduction to the topic for graduate students, advanced undergraduates and younger researchers. It was designed as a reminder to more experienced researchers in and out of academia that the problems of artifacts in behavioral research that they may have learned about as beginning researchers have not gone away. For example, problems of experimenter effects have not been solved. Experimenters still differ in the ways in which they see, interpret and manipulate their data. Experimenters still obtain different responses from research participants, human or infrahuman, as a function of experimenters' states and traits, of biosocial, psychosocial and situational origins. Experimenters' expectations still serve too often as self-fulfilling prophecies, a problem that biomedical researchers have acknowledged and guarded against better than have behavioral researchers. e.g. many biomedical studies would be considered of unpublishable quality had their experimenters not been blind to experimental condition. Problems of participant or subject effects have also not been solved. We usually still draw our research samples from a population of volunteers that differ along many dimensions from those not finding their way into our research. Research participants are still often suspicious of experimenters' intent, try to figure out what experimenters are after and are concerned about what the experimenter thinks of them.

Communication Yearbook 3 Dan Nimmo, 1979-01-01 **Handbook of Research on Applied Social Psychology in Multiculturalism** Christiansen, Bryan, Chandan, Harish C., 2021-06-18. Social psychology is the scientific study of how the thoughts, feelings and behaviors of individuals are influenced by the actual, imagined and implied presence of others. In this definition, scientific refers to the empirical investigation using the scientific method, while the terms thoughts, feelings and behaviors refer to the psychological variables that can be measured in humans. Moreover, the notion that the presence of others may be imagined or implied suggests that humans are malleable to social influences even when alone, such as when watching videos or quietly appreciating art. In such situations, people can be influenced to follow internalized cultural norms. Social psychology deals with social influence, social perception and social interaction. The research in this field deals with what shapes our attitudes and how we develop prejudice. The **Handbook of Research on Applied Social Psychology in Multiculturalism** explores social psychology within the context of multiculturalism and the way society deals with cultural diversity at national and community levels. It will cover major topics of social psychology such as group behavior, social perception, leadership, non-verbal behavior, conformity, aggression and prejudice. This book will deal with social psychology with a direct focus on how different cultures can coexist peacefully by preserving, respecting and even encouraging cultural diversity along with a focus on the psychology that is hindering these efforts. This book is essential for researchers in social psychology and the social sciences, activists, psychologists, practitioners, researchers, academicians and students interested in how social psychology interacts with multiculturalism. **On Social Psychology** George Herbert Mead, 1964 **Handbook of Industrial, Work & Organizational Psychology** Neil Anderson, Deniz S.
