 Rackstraw,2025-05-09 In the early 1970s the problem of arousing and maintaining the curiosity of children had been a
 recurrent theme in reports concerned with the development of new school curricula However before these ideas could be
 translated into soundly based practical measures an increased understanding of what is involved in the activities of
 questioning and answering was needed Originally published in 1972 the research reported in these two volumes presents a
 theoretical framework for describing linguistic features of a range of verbally expressed answers and their associated
 questions Basil Bernstein s theory is used to generate a number of predictions about the variety and quality of answers that
 mothers and children are likely to offer to wh questions The usefulness of the scheme is tested against the answering
 behaviour of members of different social classes and in the main Bernstein s predictions are supported The validity of the
 categories in the classificatory scheme is explored more fully in later chapters by means of a correlational analysis of the
 answers of seven year old children Volumes sold separately Kurukshetra August 2024 (English) Publications Division, A

Beyond Sociology's Tower of Babel Bernard S. Phillips, 2001 To look outside the discipline of sociology is to find little credibility given to the field as science Bernard Phillips argues that we are learning to see ever more clearly the contradiction between scientific standards and what in fact has been achieved by sociology Instead of knowledge based on the full range of our findings we have separate pieces of knowledge located within the diverse areas of the discipline and fads and fashions in the ideas and terms we use with relatively little cumulative development This has led many to question whether any scientific method can be applied to human behavior If the arguments and alternative interpretations in this book on the problematic nature of sociology's use of scientific method prove to be credible and fruitful then the implications are profound For example the conclusions drawn for every single social science study that has ever been conducted would be open to reinterpretation because they fail to take into account systematically the enormous complexity involved within any given instance of human behavior Our present approach assumes implicitly that the pieces of the human jigsaw puzzle can at some point be put together so as to yield a coherent picture Yet as Phillips shows if each piece is itself deficient then no coherent picture emerges when we attempt to put the pieces together Refusing to take the current fragmentation of sociology as inevitable Phillips offers a clear vision through a series of heuristic web images of how sociologists might achieve the cumulative development and credibility that are the hallmarks of any science His research draws heavily on the works of classical and contemporary theorists philosophers and historians of science as well as on postmodernist critiques and responses to postmodernism This reconstruction will be useful for courses in method in the study of the classical tradition of sociology Bernard Phillips was introduced to sociology at Columbia University by C Wright Mills A former professor of sociology at Boston University cofounder of the ASA Section on Sociological Practice and founder of the Sociological Imagination Group his publications emphasize methodology and theory
