Asphalt Pavements Patrick Lavin,2003-09-02 Asphalt Pavements provides the know how behind the design production and maintenance of asphalt pavements and parking lots Incorporating the latest technology this book is the first to focus primarily on the design production and maintenance of low volume roads and parking areas Special attention is given to determining the traffic capacity required thickness and asphalt mixture type for parking applications Topics covered include material information such as binder properties testing grading and selection construction information such as mixing plant operation proportioning mixture placement and compaction and design information such as thickness and mixture design methods and guidelines on applying these to highways city streets and parking Areas It is an essential practical guide aimed at those engineers and architects who are not directly involved in the asphalt industry but who nonetheless need to have a good general knowledge of the subject Asphalt Pavements provides a novice with enough information to completely design construct and specify an asphalt pavement      *Report of the Workshop on Intelligent Compaction for Soils and HMA* David J. White (Ph. D.),2008 This document summarizes the discussion and findings of a workshop on intelligent compaction for soils and hot mix asphalt held in West Des Moines Iowa on April 2 4 2008 The objective of the meeting was to provide a collaborative exchange of ideas for developing research initiatives that accelerate implementation of intelligent compaction IC technologies for soil aggregates and hot mix asphalt Technical presentations working breakout sessions a panel discussion and a group implementation strategy session comprised the workshop activities About 100 attendees representing state departments of transportation Federal Highway Administration contractors equipment manufacturers and researchers participated in the workshop

**Foundation Engineering Handbook** Hsai-Yang Fang,2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings

transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction
