**Sustainability for the Nation** National Research Council, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Sustainability Linkages in the Federal Government, 2013-07-11 A sustainable society according to one definition is one that can persist over generations one that is far seeing enough flexible enough and wise enough not to undermine either its physical or its social system of support As the government sector works hard to ensure sufficient fresh water food energy housing health and education for the nation without limiting resources for the future

generations it is clear that there is no sufficient organization to deal with sustainability issues. Each federal agency appears to have a single mandate or a single area of expertise making it difficult to tackle issues such as managing the ecosystem. Key resource domains which include water, land, energy and nonrenewable resources for example are nearly completely connected yet different agencies exist to address only one aspect of these domains. The legendary ecologist John Muir wrote in 1911 that when we try to pick out anything by itself we find it hitched to everything else in the Universe. Thus in order for the nation to be successful in sustaining its resources linkages will need to be built among federal, state and local governments, nongovernmental organizations, NGOs and the private sector. The National Research Council (NRC) was asked by several federal agencies, foundations and the private sector to provide guidance to the federal government on issues related to sustainability linkages. The NRC assigned the task to a committee with a wide range of expertise in government, academia and business. The committee held public fact-finding meetings to hear from agencies and stakeholder groups, examined sustainability management examples, conducted extensive literature reviews and more to address the issue. Sustainability for the Nation: Resource Connection and Governance Linkages is the committee's report on the issue. The report includes insight into high priority areas for governance linkages, the challenges of managing connected systems, impediments to successful government linkages and more. The report also features examples of government linkages which include Adaptive Management on the Platte River, Philadelphia's Green Stormwater Infrastructure and Managing Land Use in the Mojave.

*Environmental Sustainability in Transatlantic Perspective* Manuela Achilles, Dana Elzey, 2013-09-12. Experts from business, academia, governmental agencies and non-profit think tanks to form a transnational and multi-disciplinary perspectives on the combined challenges of environmental sustainability and energy security in the United States and Germany.

Government Reports, Announcements & Index, 1981      **Climate Change 2022 - Impacts, Adaptation and Vulnerability** Intergovernmental Panel on Climate Change (IPCC), 2023-06-22. The Working Group II contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change. IPCC provides a comprehensive assessment of the scientific literature relevant to climate change impacts, adaptation and vulnerability. The report recognizes the interactions of climate, ecosystems and biodiversity and human societies and integrates across the natural, ecological, social and economic sciences. It emphasizes how efforts in adaptation and in reducing greenhouse gas emissions can come together in a process called climate resilient development which enables a liveable future for biodiversity and humankind. The IPCC is the leading body for assessing climate change science. IPCC reports are produced in comprehensive, objective and transparent ways ensuring they reflect the full range of views in the scientific literature. Novel elements include focused topical assessments and an atlas presenting observed climate change impacts and future risks from global to regional scales.
