Industry Leader
for Gas Turbine Power

Solar Turbines Incorporated, a subsidiary of Caterpillar Inc., is a leading producer of industrial gas turbines and turbomachinery packages in the 1-to-15 MW (1,500-to-19,500 hp) range. Headquartered in San Diego, California, Solar designs and manufactures its proven line of compressor sets, mechanical-drive packages, and generator sets using state-of-the-art operations certified by DNV to conform to the ISO 9000 series of Quality Systems Standards.

This unparalleled experience gives testimony to the mature design and wide user acceptance of Solar's products.

Solar's compact, lightweight, and durable gas turbines offer the highest thermal efficiencies in their power classes. Other advantages include ease of transport and installation, long life, high performance, availability, reliability, and low maintainability. Units in the *Centaur*®, *Taurus*™, *Mars*® and *Titan*™ gas turbine families are available with Solar's award-winning, pollution-prevention *SoLoNO_x*™ combustion system.

As of January 2002, customers had ordered or installed nearly 935 *SoLoNO_x* gas turbines and those units already have logged approximately 15 million operating hours. Solar's experience with dry, lean-

Kathryn Henderson,1998-12-01 The role of representation in the production of technoscientific knowledge has become a subject of great interest in recent years In this book sociologist and art critic Kathryn Henderson offers a new perspective on this topic by exploring the impact of computer graphic systems on the visual culture of engineering design Henderson shows how designers use drawings both to organize work and knowledge and to recruit and organize resources political support and power Henderson s analysis of the collective nature of knowledge in technical design work is based on her participant observation of practices in two industrial settings In one she follows the evolution of a turbine engine package from design to production and in the other she examines the development of an innovative surgical tool In both cases she describes the messy realities of design practice including the mixed use of the worlds of paper and computer graphics One of the goals of the book is to lay a practice informed groundwork for the creation of more usable computer tools Henderson also explores the relationship between the historical development of engineering as a profession and the standardization of engineering knowledge and then addresses the question Just what is high technology and how does its affect the extent to which people will allow their working habits to be disrupted and restructured Finally to help explain why visual representations are so powerful Henderson develops the concept of metaindexicality the ability of a visual representation used interactively to combine many diverse levels of knowledge and thus to serve as a meeting ground and sometimes battleground for many types of workers
