Life-Cycle Analysis of Energy Systems Bent Sørensen, 2011-06-06 Life cycle assessment of new energy solutions plays an important role in discussions about global warming mitigation options and the evaluation of concrete energy production and conversion installations This book starts by describing the methodology of life cycle analysis and life cycle assessment of new energy solutions It then goes on to cover in detail a range of applications to individual energy installations national supply systems and to the global energy system in a climate impact context Coverage is not limited to issues related to commercial uses by consultants according to ISO norms It also emphasizes life cycle studies as an open ended scientific discipline embracing economic issues of cost employment equity foreign trade balances ecological sustainability and a range of geo political and social issues A wealth of applications are described and a discussion on the results obtained in each study is included Example areas are fossil and nuclear power plants renewable energy systems and systems based on hydrogen or batteries as energy carriers The analysis is continued to the end users of energy where energy use in transportation industry and home are scrutinized for their life cycle impacts Biofuel production and the combustion of firewood in home fireplaces and stoves are amongst the issues discussed A central theme of the book is global warming The impacts of greenhouse gas emissions are meticulously mapped at a depth far beyond that of the IPCC reports A novel and surprising finding is that more lives will be saved than lost as a direct consequence of a warmer climate After a 2oC increase in temperature the reduction in death rates in areas with cold winters would outweigh the increase in the death rates in hot climates However this is only one of several impacts from greenhouse gases and the remaining ones are still overwhelmingly negative The fact that some population groups may benefit from higher temperatures notably the ones most responsible for greenhouse gas emissions whilst others who did not contribute much to the problem suffer is one of the main points of the book The book is suitable as a university textbook and as a reference source for engineers managers and public bodies responsible for planning and licensing

Magnesium Karl U. Kainer, 2006-03-06 The need for light weight materials especially in the automobile industry created renewed interest in innovative applications of magnesium materials This demand has resulted in increased research and development activity in companies and research institutes in order to achieve an improved property profile and better choice of alloy systems Here development trends and application potential in different fields like the automotive industry and communication technology are discussed in an interdisciplinary framework

The Automotive Industry and the Environment Paul Niewenhuis, Peter Wells, 2003-08-15 Building on a wealth of research The

Automotive Industry and the Environment addresses current challenges in the automotive industry and how they can be met. The authors discuss the development of the automotive industry and the problems it currently faces and consider possible solutions. The book reviews trends in more environmentally friendly technologies such as the use of more sustainable fuel sources and new types of modular designs with built-in recyclability. The book also describes new models of decentralized production, particularly the micro factory retailing MFR model that provides an alternative to volume production and promises to be both more sustainable and more profitable.

Success Factors of Regional Strategies for Multinational Corporations Patrick Heinecke, 2011-01-15 This work examines the factors that drive the success of Multinational Corporations (MNCs) in their pursuit of regional strategies. The author develops a comprehensive regional success factor model by which the effects of regional management autonomy and regional product and service adaptation on the regional success of MNCs, as well as the interaction effects of regional orientation and inter-regional distance, are investigated. The model is evaluated by means of the partial least squares (PLS) method on the basis of a survey-based inquiry of the Fortune Global 500 firms with success indicator data for a period of nine years. The findings highlight the importance of considering the different degrees of contextual influence in the design of regional strategies where low degrees of regional management autonomy and high levels of regional product/service adaptation are found to be appropriate for MNCs to be regionally successful.
