

WESTERN CIVILIZATION TEST 1

September 8 - September 24 Notes

AEGEAN CIVILIZATION: C. 2000 to 1200 BCE wiped out by a volcano

The Minoans, (2000 to 1450 BCE) lived on the island of Crete in the Mediterranean Sea. Had a hereditary king (allowed the people to come and live with him at a time of attack), and they were loving people who made a living through agriculture and trade.

The Myceneans lived on Mycenea (present-day Mainland), city-state, they were pirates and thieves who made a living by stealing. They lived in the Lion Gate Palace which was designed to be a fortress, angry looking, broken, not attractive. They used a "honey-comb" construction where you could pull out a stone from the walls in the palace to hide the items they stole.

Contrast		
	Minoans	Myceneans
Settlement	Crete, Palace of Knossos, chief of settlement governed by a monarchy, King Minos	On the Greek Mainland, settlement names: Mycenae, Pylos, Thebes, up to present Athens. Made their living through piracy.
Economy	Agriculture and trade, wheat, Feta, olives/olive oil, seafood, wine; jewelry makers, made clothing	Food- wheat, olives/olive oil, wine (they stole most of it)
Government and Politics	Monarchy, polis: city-state, manageable territory	Polis: city-state, governed through monarchy or an oligarchy- "rule of few"

Students have generally found algebra and trigonometry difficult subjects to understand and learn. Despite the publication of hundreds of textbooks in this field, each one intended to provide an improvement over previous textbooks, students of algebra and trigonometry continue to remain perplexed as a result of numerous subject areas that must be remembered and correlated when solving problems. Various interpretations of algebra and trigonometry terms also contribute to the difficulties of mastering the subject. In a study of algebra and trigonometry, REA found the following basic reasons underlying the inherent difficulties of both math subjects:

- No systematic rules of analysis were ever developed to follow in a step by step manner to solve typically encountered problems.
- This results from numerous different conditions and principles involved in a problem that leads to many possible different solution methods.
- To prescribe a set of rules for each of the possible variations would involve an enormous number of additional steps, making this task more burdensome than solving the problem directly due to the expectation of much trial and error.
- Current textbooks normally explain a given principle in a few pages written by a mathematics professional who has insight into the subject matter not shared by others.
- These explanations are often written in an abstract manner that causes confusion as to the principle's use and application.
- Explanations then are often not sufficiently detailed or extensive enough to make the reader aware of the wide range of applications and different aspects of the principle being studied.
- The numerous possible variations of principles and their applications are usually not discussed, and it is left to the reader to discover this while doing exercises.
- Accordingly, the average student is expected to rediscover that which has long been established and practiced but not always published or adequately explained.
- The examples typically following the explanation of a topic are too few in number and too simple to enable the student to obtain a thorough grasp of the involved principles.
- The explanations do not provide sufficient basis to solve problems that may be assigned for homework or given on examinations.
- Poorly solved examples such as these can be presented in abbreviated form which leaves out much explanatory material between steps and as a result requires the reader to figure out the missing information.
- This leaves the reader with an impression that the problems and even the subject are hard to learn completely, the opposite of what an example is supposed to do.
- Poor examples are often worded in a confusing or obscure way.
- They might not state the nature of the problem or they present a solution which appears to have no direct

relation to the problem These problems usually offer an overly general discussion never revealing how or what is to be solved Many examples do not include accompanying diagrams or graphs denying the reader the exposure necessary for drawing good diagrams and graphs Such practice only strengthens understanding by simplifying and organizing algebra and trigonometry processes Students can learn the subject only by doing the exercises themselves and reviewing them in class obtaining experience

minerals special issue application of remote sensing for mineral - Dec 09 2022

web may 31 2023 in the exploration stage hyperspectral remote sensing plays an important role in mineral identification geological mapping alteration anomaly zoning and prospecting prediction while in the development stage remote sensing technology is often employed as a monitoring tool identifying possible geological disasters caused by

hyperspectral remote sensing in lithological mapping mineral - Nov 27 2021

web jul 1 2021 this article reviews the potential of hyperspectral remote sensing hrs technique in various geological applications ranging from lithological mapping to exploration of economic minerals of lesser

mineral exploration employing drones contemporary geological - Sep 06 2022

web aug 1 2023 hyperspectral remote sensing is successfully used in mineral exploration due to its spatial resolution hyperspectral sensor has been used in identifying mineral content in an ore for knowing the mineral content of an ore in advance to facilitate efficient mineral processing of the ore

mineral exploration by hyperspectral remote sensing technique - Jan 10 2023

web hyperspectral remote sensing sep 14 2022 hyperspectral remote sensing theory and applications offers the latest information on the techniques advances and wide ranging applications of hyperspectral remote sensing such as forestry agriculture water resources soil and geology among others the book also presents hyperspectral data

hyperspectral remote sensing applied to mineral exploration in - Nov 08 2022

web feb 1 2018 this case study shows the key role of hyperspectral remote sensing and of multiple data integration method for mineral exploration discriminating a potential high sulfidation epithermal target in the southern peru chapi chiara marked by similar characteristics observed in other known prospects and deposits

application of hyperspectral remote sensing for supplementary - Sep 18 2023

web jan 11 2021 hyperspectral remote sensing classification identification and quantitative analysis methods were used to study the main mineral resources and rock mass occurrence finally deposit

hyperspectral remote sensing for mineral exploration in pulang - May 02 2022

web the launch of the first spaceborne hyperspectral instrument hyperion in 2000 has provoked further research into its capabilities with regard to mineral exploration our study in the remote mountainous region of pulang china employed a two step progressive approach first to locate target areas characterized by hydrothermal mineral
