encyclopedia The selection of topics is restricted to material which is considered to be essential and which can be covered in a 15 week semester course For those professors who want to teach a two semester course supplemental topics can be found which deepen the understanding These sections are marked by an asterisk Fourth the present text leaves the teaching of crystallography X ray diffraction diffusion lattice defects etc to those courses which specialize in these subjects As a rule engineering students learn this material at the beginning of their upper division curriculum The reader is however reminded of some of these topics whenever the need arises Fifth this book is distinctly divided into five self contained parts which may be read independently
