Welfare of Farmed Fish in Present and Future Production Systems Hans van de Vis, Anders Kiessling, Gert Flik, Simon Mackenzie, 2012-09-19 The book entitled *Welfare of farmed fish in present and future production systems* summarises the view of more than 80 experts in the field of fish welfare collected over a period of more than five years in an international network entitled *Welfare of Fish in European Aquaculture Cost action 867* which was sponsored by the COST Office COST is the acronym for European Cooperation in Science and Technology During the time of the action a shift became evident in the general perception of fish welfare It now not only includes variables with very direct effects on growth and thereby the economy of the farmer such as disease water and feed quality but the term also includes fish preferences and biology based stimulation measures This Cost action has contributed to the notion that welfare sets biological criteria for a sustainable production system We present the reader with an overview of the results obtained which can help to guide the way towards welfare of farmed fish in present and future production systems The first chapter gives an overview of the scientific papers that follow All scientific papers and the first chapter were previously published in *Fish Physiology and Biochemistry* vol 38 number 1 2012 Given the accruing interest in fish welfare in society each of these scientific papers should be accessible for stakeholders that are not part of the research community For that reason each of the scientific papers is preceded by a summary for non experts Previously published in *Fish Physiology and Biochemistry* vol 38 number 1 2012 *Welfare of fishes in aquaculture* Food and Agriculture Organization, 2019-08-06 The welfare of fish in aquaculture is of increasing public concern in Europe and thus of growing importance for fish farmers Although the topic can be regarded as controversial due in particular to the lack of available knowledge there is nevertheless an urgent need for fish farmers authorities and scientists to develop criteria approaches and practices to monitor and safeguard the welfare of cultured fish The objective of this document is to provide the opinion of EIFAAC Member institutions as the reference body in the field of inland fisheries and aquaculture on how given the current state of scientific knowledge fish welfare issues can be integrated into best practice guidelines for fish culture This report deals with the welfare of farmed finfish and neither addresses capture fisheries be they commercial or recreational nor welfare issues related to the culture of crustaceans and molluscs The report focuses on the welfare issues of on growing fish while giving little to no attention to larvae fry and broodstock Likewise the report focuses primarily on the culture conditions for farming of fish and gives little attention to welfare aspects related to transport and slaughter Finally emphasis is given to the culture of freshwater fish but marine species are included where appropriate It is understood that the principal welfare issues are comparable for freshwater and marine fish culture The Welfare of Fish Tore S. Kristiansen, Anders Fernö, Michail A. Pavlidis, Hans van de Vis, 2020-07-01 This book investigates how fish experience their lives their amazing senses and abilities and how human actions impact their quality of life The authors examine the concept of fish welfare and the scientific knowledge behind the inclusion of fish within the moral circle and how

this knowledge can change the way we treat fish in the future In many countries fish are already protected by animal welfare legislation in the same way as mammals but in practice there is still a major gap between how we ethically view these groups and how we actually treat them The poor treatment of fish represents a massive animal welfare problem in aquaculture and fisheries both in terms of the number of animals affected and the severity of the welfare issues Thanks to its interdisciplinary scope this thought provoking book appeals to professionals academics and students in the fields of animal welfare cognition and physiology as well as fisheries and aquaculture management

Critical Role of Animal Science Research in Food Security and Sustainability National Research Council,Division on Earth and Life Sciences,Board on Agriculture and Natural Resources,Policy and Global Affairs,Science and Technology for Sustainability Program,Committee on Considerations for the Future of Animal Science

Research,2015-03-31 By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion. With globalization and expected growth in global affluence a substantial increase in per capita meat, dairy and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security. Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development, technology and resource needs for research in the field of animal agriculture both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security, evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems and identifies factors that may impact the ability of the United States to meet demand for animal products including the need for trained human capital, product safety and quality and effective communication and adoption of new knowledge, information and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies and new ways of approaching agriculture if the food, feed and fiber needs of the global population are to be met. The recommendations of Critical Role of Animal Science Research in Food Security and Sustainability will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century. **Blindness, Light, and the COVID-19 Pandemic** Andres M.
