Be a Superconductor—of Science!

John Vander Sande wants your city to run more efficiently. A company he cofounded is working to replace old power lines with materials that let electric current flow more efficiently. These materials are called superconductors.

materials are called superconductors. Superconductors are often found in lab equipment, as shown at the left, but companies like Vander Sande's are finding other uses for them. Vander Sande didn't start his career working with power lines. He began his work in materials science as a professor at the Massachusetts Institute of Technology (MIT). He got into superconducting by chance after hearing about discoveries at a lecture by one of his colleagues. He encourages everyone to stay open to opportunities in science, because they can pop up anywhere at any time.
