

Want to design your own chimney kit? Here's how:

1) Find out your roof pitch. Roof pitch is rise over run (6/12 pitch means the roof goes up 6" for every 12" horizontal).

2) Measure the horizontal distance (in feet) from where your chimney will penetrate the roof to the peak of the roof. (If the distance is over 10' - just use 10').

3) Multiply this number by the numerator of your roof pitch. Example: 10' away from peak with a 6/12 pitch = $10 \times 6 = 60$. This is the height (in inches) above the roof you would need to rise in order to be even with the peak or the point 10' away.

4) Add 24". This is the total height your chimney should be above the edge of the roof.

5) Decide where you will pass through the wall. (The longer you keep the pipe in the house the better! See our article [What Makes a Good Chimney](#) for more details). Measure from that point up to the edge of the roof. Add this to your result from step 4. This is the total length of Class A Stainless Steel chimney pipe you will need. Choose from lengths and components below for your kit.

Very Important Exceptions:

A. 36" is the minimum height above the roof. Even if you need less than 36" to get above the peak, you'll still have to rise 36" above the roof penetration in order to meet national safety codes.

B. 14.5' is the minimum height for adequate draft. If the total height of your chimney system from stove flue exit to chimney cap is less than 14.5', you should add length in order to meet this minimum and ensure good performance from your stove and chimney.
