Frederick,Scott E. Dunbar,2019-08-27 In A Christian Approach to Work and Family Burnout Calling Caring and Connecting Thomas V Frederick and Scott E Dunbar provide a Christian spiritual model to prevent and cope with burnout caused by the workplace and conflict with family Coupled with indifference and lack of urgency burnout eliminates a sense of purposefulness and results in psychological depletion To counter this Frederick and

Dunbar stress the importance of connecting with God in order to understand intrinsic motivations and redefine work as a calling and means to care for others

Belief, Behavior, and Health Sandra D. Lane, 2024-10-03 This book uniquely examines across cultures the health benefits and detriments of religious beliefs with important implications for individual wellbeing and human survival *Belief Behavior and Health* takes the reader through journeys of the author's research in the Middle East Africa and the urban United States where she focused on the unequal health and survival of women globally and vulnerable groups in the United States Almost every health problem especially those experienced by the poor and disadvantaged arose from or was made worse by the conditions in the environment in which people lived Lane's detailed studies of beliefs about Judaism Christianity and Islam led to the author's deep observations on how religious belief and practice as well as discrimination due to religious prejudice can be a major influence on health both positively and negatively In this book Lane shows how religious precepts and cultural influences on religious behavior function as social determinants of health An accessible and compelling read this book will appeal to students and scholars of public health anthropology and sociology and those interested in the influence of religion on health outcomes

Rules for Rebels Max

Abrahms, 2018-09-12 Ever wonder why militant groups behave as they do For instance why did Al Qaeda attack the World Trade Center whereas the African National Congress tried to avoid civilian bloodshed Why does Islamic State brag over social media about its gory attacks while Hezbollah denies responsibility or even apologizes for its carnage This book shows that militant group behaviour depends on the tactical intelligence of the leaders The author has extensively studied the political plights of hundreds of militant groups throughout world history and reveals that successful militant leaders have followed three rules These rules are based on original insights from the fields of political science psychology criminology economics management marketing communication and sociology It turns out there's a science to victory in militant history But even rebels must follow rules

Owning a Body + Moving a Body = Me? Lorenzo Pia, Francesca Garbarini, Andreas Kalckert, Hong Yu Wong, 2019-05-16 The conscious experience of the bodily self is a cornerstone of human nature which allows us to delineate the boundaries between the surrounding environment and us A plethora of clinical and experimental investigations has clearly demonstrated that bodily self consciousness draws on different neuro cognitive mechanisms with distinct anatomo functional underpinnings Among these the sense of body ownership i.e. my body belongs to me and the sense of agency i.e. I am the author of my actions have attracted increasing interest in recent years The former seems to be strongly rooted in afferent sensory signals whereas the latter appears to be rooted in efferent motor signals and or the monitoring of their sensory consequences Despite the consensus that the interplay between body ownership and the sense of agency contribute to the omnipresent conscious experience of the bodily self the character and the form of this relationship remain unclear Though research into the mechanisms underlying ownership e.g. bodily illusions or on agency e.g. intentional binding is blooming very few studies have aimed to investigate both these processes at the same time Therefore many

questions remain unresolved for example how do the experiences of ownership and agency influence each other What are the anatomo functional substrates of their interplay and how does damage to these structures affect the experience of either ownership or agency or both in clinical populations What is the specific role of efferent and afferent signals and how may these be complimented by other inputs like emotional or interoceptive cues And going beyond the mechanisms and anatomo functional substrates are there rational relations between the representations underlying body ownership and agency so that ownership can be seen as a condition on intentional action and a sense of agency Elucidating the complex relationship between ownership and agency is a crucial step in our understanding of bodily self consciousness and may help us to better understand the variety of neurological psychiatric disorders affecting the perception of one s own body and its movements These insights can contribute to the development of future prosthetic devices or virtual reality applications which may in turn allow for new approaches in neuroscience rehabilitative medicine and therapeutic interventions The Engineer ,1889

Inflammation and Chronic Disease Arch Mainous, Frank A. Orlando, 2024-07-10 One of the most important medical discoveries of the past several decades has been that inflammatory processes are involved in not just a few select disorders but a wide variety of mental and physical health problems Inflammation is directly linked to morbidity and mortality Some estimates suggest that inflammation plays a key role in ischemic heart disease stroke cancer diabetes mellitus chronic kidney disease non alcoholic fatty liver disease NAFLD and autoimmune and neurodegenerative conditions Understanding the role of inflammation has helped us better understand many chronic diseases their progression and potential prevention For example substantial advances in basic and experimental science have illuminated the role of inflammation and the underlying cellular and molecular mechanisms that contribute to atherogenesis and atherosclerosis On a more clinical level population based studies have demonstrated that baseline C Reactive Protein CRP levels predict future cardiovascular events
