USAG Benelux Leader's Guide To Composite Risk Management

Composite Risk Management

WHAT IS COMPOSITE RISK MANAGEMENT?

- Composite Risk management is a decision making process used to mitigate risks associated with all hazards that have the potential to injure or kill personnel, damage or destroy equipment, or otherwise impact mission effectiveness. The focus is now on what can kill people today, enemy or accident?
- Focal point of USAG Benelux Commander's Safety philosophy and Strategic Safety Plan.
- Fundamentals captured in FM 5-19.
- Risks can be quantified and managed by determining the probability and severity of a potential loss due to a hazardous condition.
- Leaders are responsible and accountable for assessing their operation as a total system and ensuring that planning, risk management decisions, and execution proactively identifies hazards, assessed the associated risks, and identifies control measures necessary to reduce the risks to the level commensurate with their commander's intent.

COMPOSITE RISK MANAGEMENT WILL...

- Allow leaders to make informed decisions
- Provide Soldiers a mental process in making decisions that affect their day-to-day lives.

WHAT LEADERS CAN DO

- Require planners/action officers to be familiar with the composite risk management process.
- Ensure composite risk assessments are an integral part of decision briefings, decision papers, and event IPR's.
- Require proponents of high risk programs to assess program documents and ensure the composite risk management process is embedded.

LEADERS SHOULD ASK...

- What are the Man, Machine, and Environment hazard factors of an operation?
- Can the hazards be eliminated?
- What are the risks if the hazards cannot be eliminated?
- How can the risks be minimized? Are there other safer options?
- Do the benefits outweigh the risks?
- Is the decision-making required at a higher level?

5-STEP PROCESS

- Identify hazards to the force.** Consider all aspects of current and future situations, environment, and known historical problem areas.
- Assess hazards to determine risks.** Assess the impact of each hazard in terms of potential loss and cost based on probability and severity.
- Develop controls and make risk**
