Digital (R)Evolution in Radiology Walter Hruby, 2013-06-29 Three decades have passed since my first personal experiences influences and contacts with computer applications in the field of medicine These experiences were influenced by diverse presentations publications and seminars concerning various applications of information technology as early as in 1970 Univac International Executive Centre Rome The first clinical proposals and discussions during the first World Congress of Intensive Care Medicine London 1974 strongly impressed me since they demonstrated that the future of medicine would be changed rapidly by the use of computer technology In 1975 when I started my radiology residency my clinical and academic interests were focused on two major topics i interventional radiology and the clinical responsibility of the radiologist for the patient and ii the improvement of radiological services for both the clinician and the patient through the use of digital technology These two topics firstly interventional radiology and secondly computer technology along with all digital techniques developed in respect to examinations and modalities have been the basis for my personal evolution of medicine especially of digital radiology

imaging modalities in routine clinical practice and large population based cohort studies The reporting of these findings may lead to further diagnostic investigations and treatment and must therefore be handled with knowledge and care The management of IFs in clinical routine is regulated by the guidelines of the different academic societies while management in the setting of research studies depends on a variety of factors In general IFs must be disclosed to the imaged subject if they are potentially clinically relevant but subjects must also be protected from the consequences of false positive findings This book written by distinguished experts in their fields discusses all these issues and will be of interest to radiologists other clinicians and radiographers technicians
