

Problems Facing the Rainforest

- The rainforests of the world are disappearing at a rate of 80 acres per minute due to deforestation.
- Farming and logging are the main reason for deforestation.
- Ranching also causes destruction of the rainforests. Ranchers clear large areas of rainforest to become pastures for their cattle.
- Trees from the rainforest are used for building houses, making furniture, and providing pulp for paper products, such as newspapers and magazines.
- Rainforest that was chopped down can grow back over time, but they will never have the same variety of plants and animals they once did.

Tropical Rainforest Research — Current Issues D.S. Edwards,W.E. Booth,S.C. Choy,2012-12-06 Proceedings of the conference held in Bandar Seri Begawan April 1993 Changes and Disturbance in Tropical Rainforest in South-East Asia D. M. Newbery,T. H. Clutton-Brock,Ghilleen T. Prance,Royal Society (Great Britain),2000 Views on the dynamics of tropical forests are changing rapidly with the recognition that their environment is variable on the decadal to century scale Fluctuating climatic conditions partly determine tropical forest structure species composition and dynamics Tropical communities are also highly contingent in space and time with respect to site and historical factors Tropical forests have experienced to some degree this disturbance regime in the past but climatologists are now predicting increasingly frequent extreme events in the new century The combination of increasing deforestation and land use conversion by man plus an increasingly variable environment means a situation that could be very difficult to manage **The Future of Tropical Rain Forests in South East Asia** J. Distribution and ecology of vascular plants in a tropical rain forest J.B. Hall,M.D. Swaine,2013-04-18 It is a privilege to be asked and a pleasurable duty for me to write the foreword of this book The conservation and wise utilisation of the humid tropical forests a unique biome are matters of great concern and importance to millions living within and around these forests and perhaps less directly to the totality of mankind These forests provide many essential products and services for mankind The list is lengthy and need not be repeated here Suffice it to say that there are not many aspects of human activity which do not utilise some of these products services or derivatives therefrom Yet it is the view of those most closely associated with the study of these forests that what is known is but a minuscule portion of whatthere is to know The products and services now utilised are perhaps some infinitesimal part of the full potential All over the tropical world however these forests are being destroyed At first slowly but now surely gathering tempo This is true also of Ghana Tracts offorest land are converted to other uses often ephemeral and not sustained Irreversible changes take place in our environment The gains are shortlived the losses unobtrusively accumulate and stay forever The accelerating rate of deforestation in the face of our relatively scanty knowledge of this biome is indeed a sad reflection of the state of human affairs It is in this setting that one welcomes this book by Messrs J B Hall and M D Swaine
