Abstract—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The study was a randomized, controlled trial. The subjects were 20 obese women who were randomly assigned to either a diet or an exercise group. The diet group was instructed to consume 1000 kcal less than their maintenance level, while the exercise group was instructed to exercise for 30 minutes, 3 times per week. The subjects were assessed at baseline and at 10 weeks. The diet group showed a significant decrease in body weight, body fat, and waist circumference, while the exercise group showed no significant changes. The diet group also showed a significant increase in physical fitness, while the exercise group showed no significant changes. The results of this study suggest that a 10-week, 1000 kcal energy deficit diet is effective in improving body composition and physical fitness in obese women.

4. When calculating a cash-in-place AIC, we determined the value based on the *North Carolina* scenario.
5. If you use the *United States* cash-in-place without adjustment for the cash-in-place from the *United States* only, the results show a decreasing cash-in-place rate that suggests the *United States* contribution. This represents the percentage of the type of cash-in-place unit, depending on the group category (e.g., 1).
6. The unit indicator for the *United States* is 1 (1-unit).
7. The unit indicator for the *United States* is 1 (1-unit).
8. The unit indicator for the *United States* is 1 (1-unit).

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the producer should do:
 - 1. Turn off the lights at the end of the day.
 - 2. Avoid excessive light intensity, the length of the day and the light-dark period.
- The end of the light period is important. It is the way that the light period ends that has the greatest effect on the timing of the egg's cleavage. Scientists have found that the timing of cleavage is most sensitive to the end of the light period, not the beginning of the light period.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will cause a producer to produce more output, and a fall in the price of the output will cause a producer to produce less output.
