Headphones can be considered loudspeakers that were specifically created to be placed over the ears of user s They are electrical devices that convert electrical signals into sounds to be heard by the user The main function of a headphone is to provide users with the ability to use them to privately listen to audio recordings This is in direct contrast to a speaker that allows everyone in close proximity to hear the sound Sometimes headphones can be referred to as ear speakers There are many different types of headphones that have different audio reproduction abilities They range from lightweight ear buds to heavy bass pumping full sized headphones that produce amazing output These can offer a range of sound that to date has remained a phenomenon It allows audiophiles to hear every sound note and accurately identify every pitch The average user will unlikely be able to differentiate the various sounds and pitches An experienced listener however is more likely to easily identify the difference *Tesla Model X* Philip Tranton,2015-12-24 The Tesla model X is a new and amazing crossover SUV that is manufactured by Tesla Motor The prototype of the vehicle was first released at Tesla Headquarters located in Los Angeles in February 2012 This model was designed similarly to the full size sedan Tesla Model S which are both being manufactured at the Los Angeles plant The first official set of deliveries of these vehicles started in September 2015 The series production vehicle was unveiled to the public in September 2015 It has unique features such as a panoramic windshield and has been rated as one of the safest SUV in regards of its frontal and side impact crash tests Tesla has been a company that focuses on energy and efficiency They also produce lithium ion batteries which is what their electric cars operate from They aim over time to sell more vehicles remain profitable and drive down the overall costs of the electric vehicles in the future
