

Bird Beaks and Feet

Introduction: A bird's beak and feet can tell us much about their habitat and lifestyle. Most birds are very different according to structural similarities between their beaks and feet. In this exercise, you will look at pictures of birds and make inferences about their lifestyles.

Description	Function
Beak	
short & rounded	pulling apart, eating insects and seeds
longer, straight	pecking, fish
thrust straight, flat & pointed	drilling for insects
flat and slightly upturned	skimming water
long and flat, like a scoop	scooping up fish
hooked	catching and holding prey
long and tubular	sucking nectar from flowers
Feet	
long muscular legs	running
long slender legs	wading
short legs with blunt claws	scratching, ground walking
three toes in front, one behind	perching
webbed	swimming
large hooklike claws (talons)	grasping prey
very short legs	hopping
two toes in front, two behind	climbing

Examine the images of birds and write your inference about what the bird eats, and where it lives.
