## **Rabbit Cardiovascular System:**

**Development of Cardiovascular Systems** Warren W. Burggren, Bradley B. Keller, 1997 This volume is a unique overview of cardiovascular development from the cellular to the organ level across a broad range of species The first section focuses on the molecular cellular and integrative mechanisms that determine cardiovascular development The second section has eight chapters that summarize cardiovascular development in invertebrate and vertebrate systems The third section discusses the effects of disease and environmental and morphogenetic influences on nonmammalian and mammalian cardiovascular development It includes strategies for the management of congenital cardiovascular malformations in utero and postnatally

**New Aspects of the Role of Adrenoceptors in the Cardiovascular System** H. Grobecker, A. Philippu, K. Starke, 2012-12-06 This volume is the product of a symposium held on 14-16 February 1985 in Hamburg in honour of the 65th birthday of Prof Hans Joachim Schumann Schumann was born on 28 December 1919 in Stralsund He studied medicine in Cologne Greifswald and Rostock The chair of pharmacology in Rostock was held at that time by Peter Holtz It was he who first introduced Schumann to pharmacology in 1944 and who was his Doktorvater research supervisor After the war Schumann again worked with Holtz in Rostock and then in Frankfurt am Main He received decisive stimuli during a research fellowship in 1956 in Prof J H Burn's department in Oxford where he also worked with Prof H Blaschko In 1964 he accepted his present position as ordinary full Professor and Head of the Institute of Pharmacology and Toxicology of the then newly founded Medical Faculty of Essen He has remained in Essen despite being offered the chair of pharmacology in Göttingen in 1968 It is interesting to observe how in the main lines of his scientific work which now spans 40 years Schumann has followed the steps involved in autonomic neuro transmission from transmitter release to transmitter receptor interaction

**Cardiovascular and Metabolic Disease** Philip Peplow, James Adams, Tim Young, 2015-05-18 Cardiovascular and metabolic diseases remain the number one cause of death in developed countries and their prevalence is increasing rapidly in developing nations This book brings together the recent information on these disorders and the links that exist between them in order to provide a complete picture of drug discovery for these conditions The main three sections comprehensively discuss obesity hypertension and cardiovascular disease and diabetes in turn following an introduction to the molecular links between them The final chapter provides perspectives on future directions of the field Chapters are contributed by leaders in the field from academia and industry and cover biomarkers risk factors gene environment interactions therapies and the various types of animal models that have been used to study each disease Case studies describing the implementation of animal models in drug development further enhance the book's usefulness as a comprehensive guide to this important therapeutic area Providing a full picture of the various types of animal models that have been used to study obesity hypertension and insulin resistance with recent case studies this book provides a valuable resource for medicinal chemists and clinicians working in these disease areas

Gene Transfer in the Cardiovascular

System Keith L. March, 2012-12-06 The goal of gene transfer is protein expression a process brought about by the insertion of a gene coding for a foreign protein into target cells resulting in the synthesis of the foreign protein For gene therapy a transferred therapeutic gene must be expressed at a level beneficial for the patient This chapter provides an introductory overview of the rapidly evolving field of non viral approaches for gene delivery to mammalian cells Although currently there are fewer ongoing clinical trials using non viral approaches than those using viral based systems the number of non viral trials is increasing The long range goal of some research groups is the development of a genetically engineered artificial virus targeted to specific cells in the human body An annual conference organized by Cambridge Healthtech Institute entitled Artificial Self Assembling Systems for Gene Transfer brings together researchers interested in this field 1 Assembly of an artificial virus is very complex other research groups aim to develop simpler delivery systems consisting of a plasmid combined with delivery agents Viral based systems are very successful for gene delivery but despite their successes viral based systems have some general limitations and system specific limitations When employing a viral based system the following limitations should be considered size limitation of the inserted gene due to packaging constraints e g adenovirus retrovirus potential tumorigenesis e g retrovirus potential for insertional mutagenesis greater than plasmid based systems potential immunogenicity e g

**Analysis and Simulation of the Cardiac System Ischemia** Rafael Beyar, Samuel Sideman, 2020-10-28 Over thirty five experts contribute to this publication about the various interactions and interrelationships of the parameters which affect the normal and ischemic heart Mechanical aspects related to the global and regional function of the heart are discussed Coronary perfusion of the ischemic heart is considered with emphasis on the effects of reperfusion Electrical activation formation of arrhythmias and the effects of ischemia on ionic transport in the myocardium are presented Metabolic aspects of the ischemic heart including calcium transport are also explained

**Simulation and Imaging of the Cardiac System** S. Sideman, Rafael Beyar, 2012-12-06 The ultrasound velocity tomography allows measurement of cardiac geometries for various phases in the cardiac cycle The present tomograph makes reconstructions at intervals of 20 ms Because of a lack of clear intramural landmarks except the roots of the papillary muscle it is difficult to pinpoint spatial trajectories of particular points in the heart Therefore a second method was developed of injecting radiopaque markers in the heart and following their motion patterns during the cardiac cycle with help of a biplane X ray equipment The data obtained with both methods can be implemented in our finite element model of the heart to compute intramural stresses and strains The results obtained so far with the extended Darcy equation to account for the interaction of blood rheology and tissue mechanics look promising Further testing with more sophisticated subjects than mentioned in Figure 9 is required before it will be implemented in our finite element model of the heart We conclude that analysis of regional cardiac function including regional myocardial blood flow requires still a major research effort but the results obtained so far justify to our opinion a continuation in this direction Acknowledgement The authors acknowledge Dr C

Borst and coworkers for doing the animal experiments and prof Van Campen and dr Grootenboer for their participation in some aspects of this work

*Nitric Oxide and the Cardiovascular System* Joseph Loscalzo, Joseph A. Vita, 2000-03-29 Leading clinical and experimental investigators comprehensively review the chemistry biochemistry molecular biology physiology and pathophysiology of nitric oxide in the cardiovascular systems These experts particularly illuminate nitric oxide biology its cardiovascular pathophysiology and its role in cardiovascular therapeutics Topics also included are the development of nitric oxide donors for the treatment of myocardial ischemia and thrombosis the development of gene therapeutic restoration of endothelial function in atherosclerosis and the application of nitric oxide biology to investigative arenas in cardiovascular medicine With its balanced presentation of basic and clinically relevant information *Nitric Oxide and the Cardiovascular System* provides a comprehensive authoritative guide for all those cardiovascular biologists cardiologists physiologists and cardiovascular surgeons engaged in today's clinical or experimental research

*The Biology of the Laboratory Rabbit* Patrick J. Manning, 2014-04-25 After nearly 20 years the publication of this Second Edition of *The Biology of the Laboratory Rabbit* attests to its popularity within the scientific community as well as to the need to update an expanding database on the rabbit as a major species in laboratory investigation The principal aim of this text is to provide a comprehensive and authoritative source of scientifically based information on a major laboratory animal species The text continues to emphasize the normal biology as well as diseases of the European domestic rabbit *Oryctolagus cuniculus* especially the New Zealand White breed with occasional reference to other rabbit species *Sylvilagus* sp and hares *Lepus* sp New topics have been added to this second edition in response to changing trends in biomedical research and product testing as well as to suggestions from readers New chapters included on Anesthesia and analgesia Models in infectious disease research Models in ophthalmology and vision research Polyclonal antibody production Toxicity and safety testing Drug doses and clinical reference data

*Biomechanics of Soft Tissue in Cardiovascular Systems* Gerhard A. Holzapfel, Ray W. Ogden, 2003-05-06 The book is written by leading experts in the field presenting an up to date view of the subject matter in a didactically sound manner It presents a review of the current knowledge of the behaviour of soft tissues in the cardiovascular system under mechanical loads and the importance of constitutive laws in understanding the underlying mechanics is highlighted Cells are also described together with arteries tendons and ligaments heart and other biological tissues of current research interest in biomechanics This includes experimental continuum mechanical and computational perspectives with the emphasis on nonlinear behaviour and the simulation of mechanical procedures such as balloon angioplasty
