1. A crate filled with delicious junk food rests on a horizontal floor. Only gravity and the support force of the floor act on it, as shown by the vectors for weight W and normal force n .

- a. The net force on the crate is (zero) (greater than zero).
b. Evidence for this is no acceleration.

2. A slight pull P is exerted on the crate, not enough to move it.

- a. The force of friction f acting on the crate is (less than) (equal to) (greater than) P .
b. The net force on the crate is (zero) (greater than zero).

3. Pull P is increased until the crate begins to move. It is pulled so that it moves with constant velocity across the floor.

- a. Friction f is (less than) (equal to) (greater than) P .
b. Constant velocity means acceleration is (zero) (greater than zero).
c. The net force on the crate is (less than) (equal to) (greater than) zero.

4. Pull P is further increased and is now greater than friction f .

- a. The net force on the crate is (less than) (equal to) (greater than) zero.
b. The net force acts toward the right, so acceleration acts toward the (left) (right).

5. If the pulling force P is 150 N and the crate doesn't move, what is the magnitude of f ? 150 N
6. If the pulling force P is 200 N and the crate doesn't move, what is the magnitude of f ? 200 N
7. If the force of sliding friction is 250 N, what force is necessary to keep the crate sliding at constant velocity? 250 N
8. If the mass of the crate is 50 kg and sliding friction is 250 N, what is the acceleration of the crate when the pulling force is 250 N? 0 m/s² 300 N? 1 m/s² 500 N? 5 m/s²

interactive video activities and smartphones in the lab the effectiveness of low cost experiments and assessment for learning through experimentation The presented research based proposals will be of interest to all who seek to improve physics teaching and learning

Challenging Modern Physics Al Kelly, 2005 Newton's Laws held for 300 years until Einstein developed the special theory of relativity in 1905 Experiments done since then show anomalies in that theory This book starts with a description of the special theory of relativity It is shown that Einstein was not the first to derive the famous equation $E=mc^2$ which has become synonymous with his name Next experimental evidence that cannot be explained by special relativity is given In the light of this evidence the two basic postulates of the special theory of relativity on the behaviour of light are shown to be untenable A new theory universal relativity is developed which conforms to the experimental evidence The movement of a conductor near a pole of a magnet and the movement of that pole near the conductor does not always give the same result It has been claimed that this contradicts relativity theory Experiments described in this book show that it is not special relativity but another basic law of physics that is contradicted Faraday's Law The Big Bang theory of the beginning of the universe is questioned and an alternative proposed The source of much of the mysterious missing dark matter that has been sought for decades by astronomers is located An explanation of the shapes of some galaxies is proffered This book presents an alternative to Einstein's special theory of relativity solves many problems left unanswered by special relativity gives a better fit to many phenomena and experimental data and is more philosophically appealing It is recommended to all people interested in fundamental issues of physics and cosmology Professor Andre Assis Brazil The book treats its subject properly not just as an impersonal set of equations but rather as a developing saga full of human triumph and failure One learns from both experimental results and simple logical argument that all is not well with modern physics Dr Neal Graneau Oxford University U K Irish engineer solves the dark secrets of space Sunday Times U K Einstein got relativity theory wrong Bangkok Post Thailand

Charles,James D. Slotta,Nathaniel Lasry,2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs

in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
